## 2 Description of the Biomass Producer and the Supply Base

### 2.1 Description of the company

Unimadeiras S.A. is Portuguese company dedicated to forestry production and trading. Its main office is located in Albergaria-a-Velha and a branch office in Figueira da Foz. Unimadeiras is the largest supplier in the Iberian Peninsula of round wood for pulp and wood chipboard for panels and MDF. Among the main customers are some of the most relevant companies in the forestry sector in Portugal: The Navigator Company (former Portucel-Soporcel Group), Altri, Sonae Indústria, LusoFinsa, Palser, Europac & C, Pinewells and Pelletspor Energy Investments. Unimadeiras has more than 640 shareholders and over 1000 timber suppliers spread across the country, creating, directly and indirectly, more than 2500 jobs. The constitution of Unifloresta group represented an important stage in the activities under the social responsibility of Unimadeiras, which obtained the certificate of sustainable forest management FSC® in 2008, and PEFC in 2012. The Unifloresta group is managed by Unimadeiras, which is responsible for ensuring compliance and enforcing of the legal requirements and applicable standards. Unimadeiras is certified by the following references:

- Quality: NP EN ISO 9001: 2015
- Forest Management: FSC-STD-PRT-01-2016 Portuguese all scope PT
- Sustainable Forest Management PEFC: NP 4406: 2014
- Chain of Custody FSC: FSC-STD-40-004 V3-1
- Chain of Custody PEFC: PEFC ST 2002:2013
- Pellets trading: SBP Standards 4 and 5 - currently applying as well for production of chips
- Sustainable biomass: SURE

---

**Products included in the scope of SBP Certification:** *Pellets, Chips*

---

**Number of employees:** 15

---

**Annual maximum production capacity (metric tonnes):** 10000

---

**Number of direct feedstock suppliers:** 17

---

**Approximate number of feedstock sub-suppliers:** 66

---

Unimadeiras has implemented FSC transfer and PEFC physical separation systems in the scope of its certificates for chips and pellets. Valid FSC and PEFC CoC system description and other documents exist. Unimadeiras trades pellets with and without physical possession. For chips Unimadeiras acts as producer and trader. Pellets are exported by sea, mainly CIF and may include storage in three warehouses: Albergaria-a-Velha, Setúbal or Figueira da Foz. The Chain of custody process is simple, and consist of purchasing - transport - (storage) - sales, based on back to back business (supplier to recipient). Possible incoterm conditions for pellets trade are FCA, DAP, DDP, DPU, CIP, EXW, FOB, CIF, CPT, and CFR. For chips, the market is in Portugal, in the industry using biomass for energy. The biomass is delivered directly to customers facilities.

## 2.2 Detailed description of the Supply Base

*Guidance: Tables below have been generated automatically for each sourcing country based on the selection of 'Feedstock origin (countries)' in section 1 above.*

*Annex 1 is generated by the system if the SBP SBE is used without Regional Risk Assessment(s) (RRAs). In case RRA(s) is used, further details shall be given only in section 3 below.*

*Annex 2 is generated if RED II SBE is in the scope for each country separately.*

<b>Country</b>	Portugal
<b>Area/Region</b>	Mainland
<b>Exclusions</b>	None
<b>Feedstock types</b>	Primary
<b>Feedstock Product Groups</b>	Forest feedstock (1A)
<b>Feedstock inputs</b>	SBP Compliant feedstock , SBP Controlled feedstock
<b>Is the forest managed to supply energy and non-energy markets?</b>	No
<b>For the forests in the Supply Base, is there an intention to retain, restock or encourage natural regeneration within 5 years of felling?</b>	Yes - Majority
<b>Risk assessment(s)</b>	Yes – Biomass Producer's own risk assessment used (SBE)
<b>Provide a concise summary of why a SBE was determined to be required or not required here:</b>	
<p>SBE was determined to be required in Portugal Mainland mainly due to the fact that in the north and centre of Portugal there are many (few hundred thousand) owners of forest lands with only one or two ha, and FSC® or PEFC group certifications, although continuously increasing, had started to develop in recent years. Additionally, the biomass market increasingly demands for sustainability requirements and Unimadeiras is committed to be recognized as a sustainable biomass operator and supplier.</p>	
<b>Feedstock types included in SBE:</b>	Primary
<b>Includes RED II SBE:</b>	Yes
<b>Includes RED II TOF:</b>	Yes
<b>Size of Supply Base area (million ha):</b>	3.2242
<b>Map(s) of the Supply Base area:</b>	

## 2.3 Feedstock information

**a. Total volume of Feedstock:** 1-200,000 tonnes

**b. Volume of primary feedstock:** 1-200,000 tonnes

**c. List of all the species in primary feedstock, including scientific name:**

Acacia dealbata	Mimosa
Acacia melanoxylon	Blackwood
Cupressus lusitanica	Portuguese cypress
Eucalyptus globulus	Common eucalyptus or blue gum
Eucalyptus nitens	Shining gum or silvertop
Eucalyptus viminalis	Manna gum or white gum
Fraxinus excelsior	Ash
Pinus nigra	Black pine
Pinus pinaster	Maritime pine
Pinus pinea	Stone pine or umbrella pine
Pinus radiata	Radiata pine
Pinus sylvestris	Scots pine
Populus nigra	Black poplar
Prunus avium	Wild cherry
Quercus faginea	Portuguese oak
Quercus robur	Common oak
Quercus rubra	Red oak
Salix alba	White willow

**d. Was the feedstock used in the biomass removed from a forest as part of a pest/disease control measure or a salvage operation?** Yes - Minority

**Explanation:** In order to reduce and prevent forest fires, whenever available, feedstock comes from forest areas affected by fires. Such wood is useless for the relevant wood industries (pulp & paper, sawmills and other).

**e. Hardwood (i.e. broadleaf trees): specify proportion of feedstock from (%):** 80.00

**f. Softwood (i.e. coniferous trees): specify proportion of feedstock from (%):** 20.00

**g. Proportion of feedstock composed of or derived from saw logs by weight (%):** 0.00

**h. Indicate how you determine the proportion of saw log:** Specification used by the sawmill closest to where the wood was grown.

**i. Roundwood from fellings from forests with > 40 yr rotation times - Average % volume of fellings delivered to BP (%):** 0.00

- j. Select forest type(s) where the primary feedstock was sourced from:** Other Naturally Regenerated Forest of Introduced Species
- k. Select the main harvesting system(s) used for the sourced primary feedstock:** Mix of the above
- l. Volume of primary feedstock from primary forest:**
- m. Volume of processing residues feedstock:** 0  
Physical form of the feedstock:
- n. Share of SBP-recognised system claim for processing residues:**
- o. Volume of post-consumer feedstock:** 0  
Physical form of the feedstock:
- p. Estimated amount of REDII-compliant sustainable feedstock that could be collected annually by the BP:** 10000 tonnes
- q. What is the estimated amount of REDII-compliant sustainable feedstock that could be harvested annually in a Supply Base (estimated):** 10000.00tonnes
- Explanation:** Unimadeiras intends to procure 100% of its biomass as REDII-compliant sustainable feedstock.

### 3 Supply Base Risk Assessments and Risk Management Measures

*Guidance: Biomass Producers shall demonstrate that any specified risks of sourcing feedstock not in compliance with SBP Standard 1 have been adequately reduced to low risk, following Standard 2 requirements. Following section applies to Biomass Producer's implementing SBP Supply Base Evaluation (SBP RRA or company own risk assessment). RED II Supply Base Evaluation details are reported in Annex 2.*

**Not Applicable – Supply Base Evaluation not implemented**

#### 3.1 Summary of the Supply Base Evaluation

Within the SBE, nine (9) indicators were identified as Specified risk for Portugal Mainland. These specified risks are, however, well mitigatable by Unimadeiras. Moreover, forestry in Portugal has a long history and a solid framework at the level of relevant entities such as ICNF (Institute of Nature Conservation and Forests), education and training entities, as well as at the level of local and central authorities. Perception of corruption in Portugal is relatively low, as confirmed by its CPI (Corruption Perception Index) score of 61 points (2023).

The supply chain is short and reliable feedstock information can be gathered with the forest owners and suppliers. Unimadeiras has a long and cooperative relation with its usual suppliers, which are CoC certified individually or group members of Unimadeiras FSC certification.

#### 3.2 Conflicts with applicable national and sub-national legislation

There aren't known conflicts with applicable legislation.

### 3.3 Risk Management Measures

*Guidance: Please provide more details about specified risk indicators in each supply country and describe mitigation measures taken to address all specified risks associated with indicators.*

<b>Country:</b> Portugal	
<b>Area/sub-scope:</b> Mainland	
<b>Risk Assessment used:</b>	
	<input type="checkbox"/> British Columbia, Canada <input type="checkbox"/> Denmark <input type="checkbox"/> Estonia <input type="checkbox"/> Latvia <input type="checkbox"/> Lithuania <input type="checkbox"/> Quebec, Canada <input checked="" type="checkbox"/> Biomass Producer's own risk assessment
<b>Indicator with specified risk:</b>	
2.1.2 Threats to and impacts on the identified key species, habitats, ecosystems, and areas of high conservation value (HCV) pertaining to biodiversity in the Supply Base shall be identified and evaluated.	
<b>Description of the specific risk:</b>	
<p>Regarding HCV 1 –Species diversity, there is a specified risk that forest operations on private, communitarian and public areas not managed by ICNF could harm species diversity.</p> <p>For HCV 3 – Ecosystems and habitats, there is a specified risk that forest operations on private, communitarian and public areas not managed by ICNF could harm ecosystems and habitats.</p> <p>There are HCV areas are designated as protected and classified areas at national or EU level (Natura 2000). There are also smaller areas and biotopes important to biodiversity, which can be classified as priority species habitats.</p>	
<b>Mitigation measure:</b>	
<ul style="list-style-type: none"> <li>- Desk Assessment of possible impacts of harvesting operations, regarding Publicly available information from credible third parties;</li> <li>- Identification and mapping of protected species, habitats and key ecosystems;</li> <li>- Training/information to suppliers on identification of forests with HCVs, and methods to protect HCVs;</li> <li>- Harvesting according to best practices in sustainable forest management.</li> </ul>	

<p><b>Monitoring and outcomes:</b></p> <p>Visit the site during or after conclusion of harvesting operations.</p> <p>The control system for feedstock includes regular follow-up of suppliers and inspections to suppliers harvesting operations to check if harvesting is made according to best practices, including for this indicator, if protection of HCV's 1 and 3 is ensured.</p> <p>If any deviations or non-conformities from this visit or other observations occur, the risk approach and its mitigation measures shall be reviewed.</p>
--

<p><b>Country:</b> Portugal</p>
<p><b>Area/sub-scope:</b> Mainland</p>
<p><b>Risk Assessment used:</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> British Columbia, Canada</li> <li><input type="checkbox"/> Denmark</li> <li><input type="checkbox"/> Estonia</li> <li><input type="checkbox"/> Latvia</li> <li><input type="checkbox"/> Lithuania</li> <li><input type="checkbox"/> Quebec, Canada</li> <li><input checked="" type="checkbox"/> Biomass Producer's own risk assessment</li> </ul>
<p><b>Indicator with specified risk:</b></p> <p>2.1.3 Key species, habitats, ecosystems, and areas of high conservation value (HCV) pertaining to biodiversity in the Supply Base shall be maintained or enhanced.</p>
<p><b>Description of the specific risk:</b></p> <p>Around 3 600 species of plants can be found in Portugal. There are 69 taxa of terrestrial mammals, a total of 313 bird species, of which around 35% are threatened, and 17 amphibians and 34 reptile species that are present in Portugal. Some of the main threats to the biological diversity of Portugal include: change or destruction of habitats; pollution; overexploitation; invasive alien species; urbanization and fires. This, in combination with the fact that there are many small parcels to which few regulations apply puts biodiversity under pressure.</p>
<p><b>Mitigation measure:</b></p> <p>Unimadeiras prepares (publicly available) data on ecosystems and habitats. This information is given to all feedstock suppliers. Feedstock suppliers are trained/informed to recognise key ecosystems and habitats.</p> <p>- Desk assessment on key ecosystems and habitats -all classified areas:</p>

- . National Network of Protected Areas;
- . Special Areas of Conservation (SAC);
- . Special Protection Areas (SPA);
- . Ramsar sites;
- . Important Bird Areas (IBA);
- . Priority habitats in Natura 2000 network;
- . Areas where threatened species occur;
- . Areas where endemic species of the Iberian Peninsula occur;
- . Areas where seasonal concentrations of species occur;
- . Large landscape level forests;
- . Important areas for watershed protection;
- Mapping of the harvesting plot, indicating key ecosystems, habitats and objects of importance to biodiversity; making photos prior to harvesting.
- Best forestry practices, including measures to conserve and increase biodiversity (for example, standing dead wood).

**Monitoring and outcomes:**

Visit the site during or after conclusion of harvesting operations.

The control system for feedstock includes regular follow-up of suppliers and inspections to suppliers harvesting operations to check if harvesting is made according to best practices, including for this indicator, if measures are in place to conserve and increase biodiversity.

If any deviations or non-conformities from this visit or other observations occur, the risk approach and its mitigation measures shall be reviewed.

**Country:** Portugal

**Area/sub-scope:** Mainland

**Risk Assessment used:**

- British Columbia, Canada
- Denmark
- Estonia

	<input type="checkbox"/> Latvia <input type="checkbox"/> Lithuania <input type="checkbox"/> Quebec, Canada <input checked="" type="checkbox"/> Biomass Producer's own risk assessment
<b>Indicator with specified risk:</b>	
2.2.1 Feedstock shall not be sourced from land that had one of the following statuses in January 2008 and no longer has that status due to land conversion: a. Forests b. Wetlands c. Peatlands d. Highly biodiverse grasslands.	
<b>Description of the specific risk:</b>	
<p>There are no assurance new eucalyptus plantations from after January 2008 are not already maintained or harvested. The new law on restricting conversion to eucalyptus plantations does not safeguard this issue sufficiently. Moreover, the forest fires result in instant harvesting of plantations, regardless of their age. For example, after a forest fire it will be difficult to determine if illegal conversion to plantations are taking place, regarding the many affected woodland parcels and timeframe for regenerating forest areas.</p> <p>The conversion of forests to urban and agricultural is a reality: in total, the forest area decreased by 150 611 ha (between 1995 and 2010, according to the 6th National Forest Inventory of the ICNF). ICNF states that the increase of wood lands exceeds the decline in forests. FAO statistics (2016) show a decrease in forest and agricultural area in Portugal.</p>	
<b>Mitigation measure:</b>	
<p>Unimadeiras checks if forests have been changed to eucalyptus or poplar plantations after 2008. (Unimadeiras considers all pine stands as forests and eucalyptus and poplar stands as plantations).</p> <p>When eucalyptus plantations are cut, the history of the plantation is investigated: the year of conversion to plantation (if it was converted after 2008); and if it was it a forest before being converted to plantation. If needed, interviews with stakeholders and residents are taken.</p> <p>This is dealt with in the Feedstock Supplier Declaration.</p>	
<b>Monitoring and outcomes:</b>	
<p>Visit the site during or after conclusion of harvesting operations.</p> <p>The control system for feedstock includes regular follow-up of suppliers and inspections to suppliers harvesting operations to check if harvesting is made according to best practices, including for this indicator, if forest land was not converted after January 2008, through interviews and search for tree stumps.</p> <p>If any deviations or non-conformities from this visit or other observations occur, the risk approach and its mitigation measures shall be reviewed.</p> <p>When forest is converted to agricultural land or a plantation, or when land use change (conversion) is planned, the feedstock is not categorized as SBP- compliant.</p>	

**Country:** Portugal

<b>Area/sub-scope:</b> Mainland	
<b>Risk Assessment used:</b>	
	<input type="checkbox"/> British Columbia, Canada <input type="checkbox"/> Denmark <input type="checkbox"/> Estonia <input type="checkbox"/> Latvia <input type="checkbox"/> Lithuania <input type="checkbox"/> Quebec, Canada <input checked="" type="checkbox"/> Biomass Producer's own risk assessment
<b>Indicator with specified risk:</b>	
2.2.2 Ecosystems, their health, vitality, functions and services in the Supply Base shall be maintained or enhanced.	
<b>Description of the specific risk:</b>	
<p>The Portuguese legal framework covering these aspects is robust but the diversity (of aspects) covered by this indicator and the ownership of the Portuguese forest, mostly small size private properties, makes it difficult to ensure that in all territory this indicator can be classified as Low risk. Thus, this indicator has Low risk in areas where management plan exists, and Specified risk in areas with no management plan.</p>	
<b>Mitigation measure:</b>	
<ul style="list-style-type: none"> <li>- Desk assessment on potential impacts of operations on forest ecosystem health, functions, vitality and services, using publicly available information;</li> <li>- Training/information to suppliers on best management practices, including measures to minimize impacts of operations.</li> </ul>	
<b>Monitoring and outcomes:</b>	
<p>Visit the site after conclusion of harvesting operations.</p> <p>If any deviations or non-conformities from this visit or other observations occur, the risk approach and its mitigation measures shall be reviewed.</p>	

<b>Country:</b> Portugal	
<b>Area/sub-scope:</b> Mainland	
<b>Risk Assessment used:</b>	
	<input type="checkbox"/> British Columbia, Canada <input type="checkbox"/> Denmark <input type="checkbox"/> Estonia <input type="checkbox"/> Latvia <input type="checkbox"/> Lithuania <input type="checkbox"/> Quebec, Canada <input checked="" type="checkbox"/> Biomass Producer's own risk assessment

<b>Indicator with specified risk:</b>
2.2.3 Soil quality in the Supply Base shall be maintained or enhanced
<b>Description of the specific risk:</b>
In some regions of the supply base there is a risk of degradation of soils (drought), mainly due to previous land-use practices and to climate change.
<b>Mitigation measure:</b>
Desk assessment of the site on soil quality using publicly available information and mapping; - Training/information to suppliers on best forestry practices, including on soil protection.
<b>Monitoring and outcomes:</b>
Visit the site during or after conclusion of harvesting operations.  The control system for feedstock includes regular follow-up of suppliers and inspections to suppliers harvesting operations to check if harvesting is made according to best practices, namely for this indicator if:  - Low intensity of forestry, selective cuttings and small clear cuts of maximum 5 ha;  - Nutrients are left in the forest, mainly the green fraction of forest residues (other forest residues need to be cleared to prevent forest fires).  - No operations occur near-water areas.  If any deviations or non-conformities from this visit or other observations occur, the risk approach and its mitigation measures shall be reviewed.

<b>Country:</b> Portugal
<b>Area/sub-scope:</b> Mainland
<b>Risk Assessment used:</b>
<input type="checkbox"/> British Columbia, Canada <input type="checkbox"/> Denmark <input type="checkbox"/> Estonia <input type="checkbox"/> Latvia <input type="checkbox"/> Lithuania <input type="checkbox"/> Quebec, Canada <input checked="" type="checkbox"/> Biomass Producer's own risk assessment
<b>Indicator with specified risk:</b>
2.2.5 Quality and quantity of ground water, surface water and water downstream shall be maintained or enhanced.

<p><b>Description of the specific risk:</b></p> <p>The thresholds mentioned by law are 50 ha and 10 ha. This are still large areas regarding the populated and hilly countryside of Portugal. A clear-cut area of less than 10 ha can easily create runoff and erosion dangers. The landscape can create dangerous situations; residents could be living in the valley. Small land owners are not obliged to take risks to the surroundings into consideration. These risks can also be related to water lines.</p>
<p><b>Mitigation measure:</b></p> <ul style="list-style-type: none"> <li>- Desk assessment on important areas for watershed protection;</li> <li>- Training feedstock suppliers on best forestry practices, including to not contaminate ground water and protect the soil, forest and surroundings from surface water runoff.</li> </ul>
<p><b>Monitoring and outcomes:</b></p> <p>Visit the site during or after conclusion of harvesting operations.</p> <p>The control system for feedstock includes regular follow-up of suppliers and inspections to suppliers harvesting operations to check if harvesting is made according to best practices, namely for this indicator if in areas vulnerable to water damage, the maximal contiguous clear cut area is 5 ha. Harvested sites and surroundings (hill slopes and streams) are inspected on:</p> <ul style="list-style-type: none"> <li>- Runoff problems (regarding the landscape, onsite and in the surroundings);</li> <li>- Groundwater level problems (too high or too low);</li> <li>- Protection of riversides and (lake) coastlines.</li> </ul> <p>If any deviations or non-conformities from this visit or other observations occur, the risk approach and its mitigation measures shall be reviewed.</p>

<p><b>Country:</b> Portugal</p>
<p><b>Area/sub-scope:</b> Mainland</p>
<p><b>Risk Assessment used:</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> British Columbia, Canada</li> <li><input type="checkbox"/> Denmark</li> <li><input type="checkbox"/> Estonia</li> </ul>

	<input type="checkbox"/> Latvia <input type="checkbox"/> Lithuania <input type="checkbox"/> Quebec, Canada <input checked="" type="checkbox"/> Biomass Producer's own risk assessment
<b>Indicator with specified risk:</b>	
2.2.11 The impacts of natural processes such as fires, pests and diseases shall be managed.	
<b>Description of the specific risk:</b>	
<p>The Specified risk indicated for this indicator is related with forest wild fires, as although since 2017, the most recent tragic year, the awareness of the population has raised and some mechanisms and obligations were implemented to better prevent and facilitate the wild fire intervention, a recent study showed that summer values of fire risk tend to substantially increase in the future, due to climate change, with a likely stretching of the danger period. The north-western region of Iberia, including the north of Portugal and the north-western-to-central Spain were the regions where larger increases in fire risk in the future were found.</p>	
<b>Mitigation measure:</b>	
<ul style="list-style-type: none"> <li>- Investigation of PMDFCI (Forest Defense Against Fires Municipal Plan / Plano Municipal de Defesa da Floresta Contra Incêndios);</li> <li>- Implementation of forest fire fighting measures according to legal requirements;</li> <li>- Training/information to suppliers on best forestry practices, including related with fire protection and prevention during operations.</li> </ul>	
<b>Monitoring and outcomes:</b>	
<p>Visit the site during or after conclusion of harvesting operations.</p> <p>The control system for feedstock includes regular follow-up of suppliers and inspections to suppliers harvesting operations to check if harvesting is made according to best practices, namely for this indicator to monitor if legal requirements for fire fighting prevention are in place, including valid fire fighting equipment. If PMDFCI is found expired, Unimadeiras investigates the reasons for such and if no reasonable justification exists (such as lack of administrative procedure or similar), the feedstock from that site cannot be considered as SBP-compliant until the Municipality has a valid PMDFCI.</p> <p>If any other deviations or non-conformities from this visit or other observations occur, the risk approach and its mitigation measures shall be reviewed.</p>	

<b>Country:</b> Portugal
<b>Area/sub-scope:</b> Mainland

<b>Risk Assessment used:</b>	
	<input type="checkbox"/> British Columbia, Canada <input type="checkbox"/> Denmark <input type="checkbox"/> Estonia <input type="checkbox"/> Latvia <input type="checkbox"/> Lithuania <input type="checkbox"/> Quebec, Canada <input checked="" type="checkbox"/> Biomass Producer's own risk assessment
<b>Indicator with specified risk:</b>	
3.3.1 Feedstock sourcing shall not compete with wood sourcing for long-lived wood products.	
<b>Description of the specific risk:</b>	
Although the experience shows that market itself regulates the proper use of wood, there are conditions that may justify a deviation on the cascade use, but this shall be properly justified.	
<b>Mitigation measure:</b>	
<ul style="list-style-type: none"> <li>- Feedstock agreements with suppliers specifying type and main characteristics of received feedstock;</li> <li>- Visual and document control of the feedstock reception.</li> </ul>	
<b>Monitoring and outcomes:</b>	
<p>Visit the site during or after conclusion of harvesting operations.</p> <p>The control system for feedstock includes regular follow-up of suppliers and inspections to suppliers harvesting operations to check if harvesting is made according to best practices, namely for this indicator to monitor if the feedstock being considered cannot be used for other purposes other than energy, i.e., if it is burnt wood or does not comply with the minimum requirements to serve other markets, such as related with dimensions and density.</p> <p>If feedstock characteristics is different from required by Unimadeiras, not respecting the cascading principle, reason of such is investigated and the risk approach and its mitigation measures shall be reviewed. If reason found unjustifiable, the feedstock is not accepted as SBP-compliant.</p>	

<b>Country:</b> Portugal	
<b>Area/sub-scope:</b> Mainland	
<b>Risk Assessment used:</b>	
	<input type="checkbox"/> British Columbia, Canada <input type="checkbox"/> Denmark <input type="checkbox"/> Estonia <input type="checkbox"/> Latvia

	<input type="checkbox"/> Lithuania <input type="checkbox"/> Quebec, Canada <input checked="" type="checkbox"/> Biomass Producer's own risk assessment
<b>Indicator with specified risk:</b>	
4.1.10 Safeguards shall be put in place to protect the health and safety of workers by developing, communicating and implementing policies and procedures.	
<b>Description of the specific risk:</b>	
This indicator is identified as Specified risk due to the inherent risk of jobs in the forests.	
<b>Mitigation measure:</b>	
<p>Unimadeiras has a control system and adequate procedures related to health and safety of forest workers and demands the same from its feedstock suppliers. Unimadeiras suppliers are required to be qualified and approved before performing any operations to Unimadeiras.</p> <p>Unimadeiras suppliers qualification process includes checking:</p> <ul style="list-style-type: none"> <li>- Work accidents Insurance and health aptitude forms;</li> <li>- Social Security responsibilities;</li> <li>- Workers training on health and safety;</li> <li>- Health and safety procedures;</li> <li>- Records of Personal Protection Equipment (PPE) delivery to workers;</li> <li>- Records of machinery safety inspections.</li> </ul>	
<b>Monitoring and outcomes:</b>	
<p>Site visits allow Unimadeiras to monitor supplier's commitment to health and safety requirements. These visits to suppliers allow to check:</p> <ul style="list-style-type: none"> <li>- Use of PPE's;</li> <li>- Medical kit availability and conformity;</li> <li>- Fire extinguishers availability and conformity;</li> <li>- Respect of safety distances;</li> <li>- Level of technical and best practices knowledge of personnel.</li> </ul> <p>If no-conformities are found, more frequent site inspections are required to that supplier, until closure of the no-conformity and confidence on supplier's performance is restored.</p>	

## 4 Stakeholder engagement

### 4.1 General description

**Biomass Producer's stakeholder engagement start date:** 16 Sep 2024

**Biomass Producer's stakeholder engagement end date:** 15 Oct 2024

**Total number of stakeholders contacted:** 80

**Give a general description of the process of Stakeholders Engagement, including stakeholders contacted, method of communication and a summary of the comments received:**

The Supply Base Report is sent to the relevant(s) e-mail contact of the entities defined and identified on Unimadeiras stakeholder's list.

Stakeholders contacted for engagement include economic, environmental and social interests:

- Forest owners;
- Forest contractors, including loggers;
- Forest industries;
- Representatives of forest workers and forest industries;
- Forest Management certificate holders;
- Government agencies and municipalities;
- NGO's;
- International, national and local labour unions;
- Representatives of local communities;
- Representatives of recreational interests;
- FSC and PEFC accredited certification bodies;
- National and regional forest institutions/agencies;
- Research universities and institutions;
- NRA working groups.

### 4.2 Response to stakeholder comments

## 5 Report updates and approval

**This document is:** New Supply Base Report (Assessments/reassessments)

**Summary of changes:** N/A

<b>Name</b>	Jorge Mendes Loureiro
<b>Title</b>	Management representative
<b>Date of report approval</b>	13 Sep 2024

## Annex 1: Detailed findings for Supply Base Evaluation indicators

Portugal Mainland	Indicator
1.1.1	Operations related to feedstock sourcing and biomass production shall comply with all existing applicable laws and regulations.
Supply Base Verifiers	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Constitution of the Portuguese Republic (Constituição da República Portuguesa): Decree of April 10, 1976; last updated by Law nº 1/2005, 12/08.</li> <li>- Cutting Trees Manifest: D.L. nº 31/2020, 30/06.</li> <li>- Pine wood Nematode (NMP) phytosanitary protection measures: D.L. nº 95/2011, 08/08; last updated by D.L. nº 9/2021, 29/01.</li> <li>- Basic Law of Forest Policy: D.L. nº 33/96, 17/08; last updated by D.L. nº 254/2009, 24/09.</li> <li>- Prohibition of premature cutting of forest stands: D.L. nº 173/88, 17/05; last updated by D.L. nº 254/2009, 24/09.</li> </ul> <p>LEGISLATION ENFORCEMENT:</p> <p>Main authorities which proceed and report inspections to forest operators:</p> <ul style="list-style-type: none"> <li>- GNR (National Republican Guard -Guarda Nacional Republicana);</li> <li>- ICNF (Nature and Forest Conservation Institute -Instituto da Conservação da Natureza e Florestas).</li> </ul> <p>LEGISLATION IMPLEMENTATION BY OPERATORS:</p> <ul style="list-style-type: none"> <li>- For Collective or Comercial entities the commercial register (Certidão Permanente)</li> <li>- Operator registry and previous notification in all cases of harvesting (MCA);</li> <li>- Operator registry and previous notification in cases of all conifers because of Nematode Pine Plan -NMP;</li> <li>- EUTR Operator Registry:</li> <li>- Information on feedstock, which shall include: type, quantity, supplier name and contacts, origin country and place;</li> </ul>

	<ul style="list-style-type: none"> <li>- Purchase and sale documents, invoices/receipts;</li> <li>- Valid declaration of taxes non-debt;</li> <li>- IES Annual Declaration;</li> <li>- Proof of Annual declaration IRS/IRC;</li> <li>- Taxes Single Report;</li> <li>- Obligatory insurance document;</li> <li>- Valid declaration of social security non-debt;</li> <li>- Unimadeiras procedure on checking legality and origin of the feedstock;</li> <li>- Forest Renting/leasing contracts (Contratos de Arrendamento Florestal);</li> </ul> <p><b>BEST PRACTICES IMPLEMENTATION BY OPERATORS:</b></p> <p>Unimadeiras qualifies and checks the legality aspects, among others, for each one of its suppliers. Unimadeiras suppliers are certified under FSC, PEFC or both CoC certification schemes.</p>
<p><b>Risk Rating justification</b></p>	<p>In public and community-owned forests, harvesting is authorized by ICNF (National Authority for Forestry and Nature Conservation). Forest biomass feedstock definition on Portuguese legislation is included on a legal framework created for dedicated energy generation plants and for residues purposes. In the first case definition of forest biomass consists of the biodegradable fraction products, waste and residues from biologic origin, from forest or other plantations. For residues purposes forest biomass is the vegetable matter from forestry and forestry waste, only including the material resulting from the improvement operations, including thinning and pruning, fuel management and harvesting of forest stands, as branches, tree-tops, stumps, leaves, roots and bark. No permit is required for logging activities, including standard commercial silvicultural harvesting, final cut and other. In fact, a legal demand is designed for cuttings in properties with areas below the size of obligatory Forest Management Plan but the details were not</p>

	<p>defined and therefore it is not in place (article 7th of Law n.º 33/96, at 17/08).</p> <p>A harvesting written notice (Manifesto) is obligatory (for timber and cork), and shall be submitted to forest authorities (ICNF) before felling/extraction operation. Approval documentation is required relating to specific operations over cork (<i>Quercus suber</i>) and Holm oak (<i>Quercus rotundifolia</i>), including cutting and pruning, Holly (<i>Ilex aquifolium</i>) cutting, and also premature cutting of Eucalyptus and <i>Pinus pinaster</i> or riparian area cutting. In all areas is obligatory to have an approved Environment Impact Assessment if afforestation or reforestation takes place with fast-growing plantation species covering over 350 ha or cutting and conversion to non-forest uses in an areas greater than 50 ha. A National Action Plan for Control of Pine Wilt Disease (NMP) <i>Bursaphelenchus xylophilus</i> and its vector insect <i>Monochamus galloprovincialis</i> is in place. This mostly focuses on <i>Pinus pinaster</i> (23% of all forest areas) but applies to all other host conifers: <i>Abies</i> spp., <i>Cedrus</i> spp., <i>Larix</i> spp., <i>Picea</i> spp., <i>Pinus</i> spp, <i>Tsuga</i> spp., <i>Pseudotsuga</i> spp.; with these species covering 8% of forests. Regarding the traceability of feedstock back to the harvest area, forest operators are obliged to submit the felling manifest (MCA -Manifesto de Corte de Árvores) for all species. Specifically for coniferous also the phytosanitary felling manifest is obligatory, which is verified regularly by SEPNA and ASAE. The MCA is in actively in force since 2021 and is verified mainly by GNR, and also by ICNF.</p> <p>Unimadeiras does not buy any wood from unknown sources nor from wood suppliers without a valid company registration and without demonstrating compliance with its legality aspects.</p>

	<p><b>BEST PRACTICES IMPLEMENTATION BY OPERATORS:</b></p> <p>Unimadeiras qualifies and checks the legality aspects, among others, for each one of its suppliers. Unimadeiras suppliers are certified under the FSC, PEFC or both CoC certification schemes.</p>
<p><b>Risk Rating justification</b></p>	<p>The Real Estate Cadastre (Cadastro Predial), the Finances Matrix (Matriz das Finanças) and the Real Estate Registry (Registo Predial) constitute an inseparable part of the management of property and of the rural property, as well as of the acts practiced on them.</p> <p>The IRN - Instituto de Registos e Notariado [Institute of Registries and Notaries] proves land rights, with the legal supporting document being the “caderneta predial” (description in the land registry), while the financial authorities (tax and customs authority) prove ownership, the supporting document in this case being the cadastral certificate. The DGT - Direção-Geral do Território [General Directorate for Territory] is the national public body with responsibility for public land use and urbanization policies. In addition, the cadastre is the multifunctional and definitive registration of the limits of real estate, linked to which are elements referring to the respective deeds and other complementary information such as easement and restrictions, use and occupation, encumbrances or charges, urban parameter value, licenses, etc. Ownership documents may or may not be supported in the geometric records of rural property. 53% of the territory is covered by Geometric Cadastre of the Rural Property (General Directorate of the Territory) providing a consistent and unequivocal correspondence between the information provided by the Finances Matrix and the Land Registry Office based on the attribution of a unique Land Identification Number (DL 172/95). In areas where this does not exist, there is another register – the land cadastre, which links land registry and financial authority information. This process can be done individually or by region, with a boundaries survey (in accordance with DGT rules, by certified teams) and identification of ownership being obligatory. The Portuguese government has developed BUPi -Digital Land Registry -a platform aimed at land owners, which allows mapping, understanding and valuing the Portuguese territory, in a simple and free-way. It started in 2017 as a pilot project in 10 Municipalities. After its success, it is now being</p>

	<p>expanded to the whole country. 100% of the land property is covered by, at least, two of the instruments presented above. Legislation has been revised in order to match legal requirements to the need for information. At present, any change of ownership must be updated in accordance with the requirements of compliance, configuration and ownership, a process that involves, in a joined up and integrated way, the three bodies: the DGT, the IRN and the AT (Autoridade Tributária e Aduaneira [Tax and Customs Authority]), by means of a unique numerical code – the “número de identificação predial” [land registration number] (NIP). It is obligatory to update registers for land rights, forestry projects and legal regime for afforestation and reforestation (for example the “regime jurídico de autorização de arborização e rearborização” [legal regime for afforestation and reforestation], or RJAAR). The institutions related to both forestry and agriculture have encouraged owners to update them. Any change of land ownership (related to inheritance, buying-selling, etc.) leads to a mandatory up-date and harmonization of the property data and information, that occurs, simultaneously on three governance bodies: the DGT [General Directorate of the Territory], the IRN [Registries Institute] and the AT [Tax and Customs Authority]), by means of a unique numerical code – the “número de identificação predial” [land registration number] (NIP).</p> <p>Portugal has a score of 83,96 out of 100 on the “Rule of Law” indicator of the World Bank Governance (2022). This indicator “captures perceptions of the extent to which agents have confidence in and abide by the rules of society, and in particular the quality of contract enforcement, property rights, the police, and the courts, as well as the probability of crime and violence.” [World Bank Governance]</p> <p>There are several legal instruments and procedures which allow the identification of illegalities related to illegal logging and legality of ownership.</p> <p>Based on Unimadeiras experience, there are no records of disputes or other conflicts related to the ownership or right of the land use. Unimadeiras does not buy any wood from unknown sources nor from wood suppliers without a valid company registration and without demonstrating compliance with its legality aspects.</p>
<b>Risk Rating</b>	Low Risk

<b>1.1.3</b>	Feedstock shall be legally harvested, supplied and produced, including in compliance with CITES, EUTR and other applicable legal trade requirements.
<b>Supply Base Verifiers</b>	APPLICABLE LEGISLATION:

- Constitution of the Portuguese Republic (Constituição da República Portuguesa): Decree of April 10, 1976; last updated by Law nº 1/2005, 12/08;
- Timber Operator Registry -Decree-Law No. 76/2013, 5/06;
- EUTR: Decree-Law No. 76/2013, 5/06 (Articles 3 and 8):  
<https://dre.pt/applica-tion/dir/pdf1sdip/2013/06/10800/0322203225.pdf>
- (UE) Regulation No. 995/2010.

#### LEGISLATION ENFORCEMENT:

The law enforcement authority is the National Republican Guard (GNR) and the surveillance and verification activities are put in place according to procedures defined by ICNF. Between 2014 and 2022, ICNF has conducted 730 inspections with 6 contraventions. In the same period, GNR conducted 358 inspections with 61 contraventions. [RUEM, March 2023] Following the implementation of EUTR and the respective Due Diligence System, as well as voluntary Chain of Custody Certifications adopted by the biomass producers, several documents are being collected by biomass producers in order to prove the provenance of the raw material and its legality.

#### LEGISLATION IMPLEMENTATION BY OPERATORS:

- EUTR Operator Registry:
- Operator registry and previous notification in all cases of harvesting (MCA);
- Information on feedstock, which shall include: type, quantity, species, supplier;
- Purchase and sale documents, invoices/receipts;
- Unimadeiras procedure on checking legality and origin of the feedstock;

Unimadeiras is registered as operator (RIO). When Unimadeiras acts as trader, requests to its suppliers their Operator registration.

#### BEST PRACTICES IMPLEMENTATION BY OPERATORS:

Unimadeiras qualifies and checks the legality aspects, among others, for each one of its suppliers. Unimadeiras suppliers are certified under the FSC, PEFC or both CoC

certification schemes. Unimadeiras has in place procedures that ensure the access

to information, risk assessment and risk mitigation measures recommended.

	This information is kept to be provided to competent authorities upon request.
<b>Risk Rating justification</b>	<p>There are no CITES species included in the CITES in Portugal.</p> <p>Regulation (EU) No 995/2010 (RUEM), of 20 October, entered into force in March 2013 and on 5 of June Decree-Law No. 76/2013 was published for its implementation in Portugal. The ICNF is the competent authority for the application of the EUTR in Portugal. Within the framework of the EUTR, two types of agents are defined: The Operator, understood as any natural or collective person who places on the market wood or wood products, and the Trader understood as any natural or collective person who in the course of a commercial activity sells or purchases in the domestic market of the European Union (EU) wood or wood products already placed in the domestic market. Operators must have a due diligence system in place for each</p> <p>wood/timber acquisition, which include procedures for access to information, risk assessment and risk mitigation. Traders must maintain relevant information about suppliers and buyers of products as well as volumes traded. This information must be kept and be provided to competent authorities upon request. Operators placing timber in the EU Indicator market for the first time should provide records of where the timber is originated, species, and quantities. In Portugal operators are required to register the operator through the system of initial registration of operators, available on the ICNF portal at <a href="https://fogos.icnf.pt/rio/register.asp">https://fogos.icnf.pt/rio/register.asp</a></p> <p>Portugal has a score of 83,96 out of 100 on the “Rule of Law” indicator of the World Bank Governance (2022). All used material is traceable to its origin</p>

	<p>through the harvest manifests and/or transport guides. Unimadeiras identifies and maps areas with High Conservation Values (HCVs).</p>
<p><b>Risk Rating justification</b></p>	<p>According to the National Report on the Implementation of Directive Habitats and Birds, forest operations are identified as a threat to 6 habitats and pressure to 8 habitats, accounting for 3.8% and 5%, respectively. A similar assessment was performed, having species (except birds) in scope and the numbers do not differ much. Forestry presents a threat to 7.7% of the species assessed and puts pressure on 9.6% of the total 426 species considered. Forest activities have a significant impact on bird attributes with 30% of the assessed species being threatened. Relevant forest ecosystems comprising primary, natural and semi-natural forests are protected by the Fundamental Network for Nature Conservation (RFCN), defined by Decree-Law No. 142/2008, which integrates the core areas of nature and biodiversity conservation:</p> <ul style="list-style-type: none"> <li>i) National Network of Protected Areas (RNAP);</li> <li>ii) SICs and ZPEs of the Natura2000 network;</li> <li>iii) Other areas classified under international commitments assumed by the Portuguese State (namely, Biosphere Reserves, Ramsar Sites and Geoparks);</li> </ul> <p>and continuity areas, safeguarded by the respective legal regimes:</p> <ul style="list-style-type: none"> <li>i) National Ecological Reserve (REN);</li> <li>ii) National Agricultural Reserve (RAN); iii) Public water domain (DPH).</li> </ul> <p>High conservation values are classified in 6 classes:</p> <p>HCV 1 – Species diversity. Concentrations of biological diversity including endemic species, and rare, threatened or endangered species, that are significant at global, regional or national levels;</p> <p>HCV 2 – Landscape-level ecosystems and mosaics. Intact forest landscapes and large landscape-level ecosystems and ecosystem mosaics that are significant at global, regional or national levels, and that contain viable populations of the great majority of the naturally occurring species in natural patterns of distribution and abundance;</p> <p>HCV 3 – Ecosystems and habitats. Rare, threatened, or endangered ecosystems, habitats or refugia;</p>

HCV 4 – Critical ecosystem services. Basic ecosystem services in critical situations, including protection of water catchments and control of erosion of vulnerable soils and slopes;

HCV 5 – Community needs. Sites and resources fundamental for satisfying the basic necessities of local communities or Indigenous Peoples (for livelihoods, health, nutrition, water, etc.), identified through engagement with these communities or Indigenous Peoples;

HCV 6 – Cultural values. Sites, resources, habitats and landscapes of global or national cultural, archaeological or historical significance, and/or of critical cultural, ecological, economic or religious/sacred importance for the traditional cultures of local communities or Indigenous Peoples, identified through engagement with these local communities or Indigenous Peoples.

In conclusion, within the Supply Base, key species, habitats, ecosystems, and areas of high

conservation value (HCV) pertaining to biodiversity in the supply are able to be identified.

HCV1:

The specific species that might be affected by forestry activities are identified in the report of the application of the Birds and Habitats Directive. Several legal instruments identify (and protect) areas of significant biological diversity:

- POAP (Planos de Ordenamento de Áreas Protegidas);
- PROF (Programas Regionais de Ordenamento Florestal);
- PDM (Planos Diretores Municipais);
- PGF (Plano de Gestão Florestal);
- PGB (Programa de Gestão da Biodiversidade)

HCV 2:

The regulation implemented in Portugal on oak and holm trees and stands, includes a comprehensive legislative framework with a legal action planning and project but also cuttings protection. This legislation also meets forest management measures related to intensity of exploitation, such as stripping and pruning. This regulation is well established and promoted. It has been assimilated by the several agents involved such as owners, managers, and operators. The awareness of operators for

planned forest management and the certification of sustainable forest management has been increasing in Portugal in recent years. Certified forest of cork and holm oak account for an estimated 236.000 ha. The most current detailed results achieved by management and improvement actions on forest stands are not fully known, since the full values of the last national inventory (IFN6) are still missing, however, it is known that the class of "wooded area with cork oak" showed

an increase of 6% from 1995 to 2010, and holm oak decreased 3% in the same period.

#### HCV 3:

Having the obligation to implement instruments as the Convention on Biological Diversity and the Habitat Directive/ Natura 2000, also is an indication of the effectiveness of protection measures and identification of rare, threatened or endangered species. Portugal is also implementing several initiatives directed to Aichi Biodiversity Targets. The Portuguese policy, legal regime and common practices enables to assume the proper protection for species.

#### HCV 4:

In Portugal there are several instruments related to the conservation of river basins, soil conservation, and protection against the risk of fire, which implies its identification. In the case of river basins, information relating to the classification of flood plains, areas threatened by floods and other relevant information can be partially obtained by consulting areas included in the REN. River basin plans also contain information that may be relevant, as do PROFs, especially where they refer to protection forests. For information about erosion control is essential to consult documentation relevant to the risk of erosion. Some of this information is contained in REN, which identifies, on a scale of 1:25.000, areas at high risk of erosion, as well as zones of instability. Areas of high fire risk are identified in fire risk maps (ICNF) and in municipal forest fire plans. Within the national context, the structure of property, being extremely fragmented, reduces the dependence on ecosystem services and means this is not critical. Furthermore, the probability of forest management activities having a significant impact on the same service is negligible. Several legal instruments safeguard the functions of protection and regulate intervention in these areas. Examples are the Water Law, river basin plans (PBH), public waters and dams planning (POAAP), National Ecological Network, etc.

#### HCV 5 :

	<p>In Portugal Mainland, there are no identified HCV5.</p> <p>HCV 6:</p> <p>The criteria for identifying HCV6 for Portugal are based on international or legal frameworks that already foresee the safeguards needed to protect/maintain the cultural values identified. At the same time, it is considered that the values are legally recognized and enforced, for instance by World Heritage site by UNESCO, Law no. 107/2001 of 8 September and Law no. 53/2012 of 5 September.</p>
<b>Risk Rating</b>	Low Risk

Portugal Mainland	Indicator
<b>2.1.2</b>	Threats to and impacts on the identified key species, habitats, ecosystems, and areas of high conservation value (HCV) pertaining to biodiversity in the Supply Base shall be identified and evaluated.

	<p>- The Special Program of the National Park Peneda-Gerês (PEPNPG) under development: Decree-Law No. 96/2017 from May 18th. The PEPNPG aims to promote the development and application of conservation measures on several environmental attributes of the first protected area in the country (since 1971).</p> <p>- Decrees-Law No. 96/2017, 99/2017, 106/2017, 107/2017, 108/2017 set the start of the</p> <p>development of the Special Program of the following protected areas: Natural Park of São Mamede (PEPNSSM); Natural Park of Arrábida (PEPNA); Natural Park of Guadiana Valley (PEPNVG); Natural Park of Tejo Internacional (PEPNTI); Natural Park of Douro Internacional (PEPNDI); Natural Park of Serra de Aire e Candeeiros (PEPNSAC); Natural Park of Litoral Norte (PEPNLN); Natural Park of Montesinho (PEPNM); Natural Park of Sintra Cascais (PEPNSC); Natural Park of Ria Formosa (PEPNRF); Natural Park of Serra da Estrela (PEPNSE).</p> <p>LEGISLATION ENFORCEMENT:</p> <p>- ICNF (Institute for Nature and Forest Conservation), APA (Portuguese Environment Agency), CCDR -Comissões de Coordenação e Desenvolvimento Regional (Regional Commissions for Coordination and Development), and GNR (National Republican Guard) through SEPNA (Nature and Environment Protection Services), are the main enforcement authorities performing inspections onsite.</p> <p>Unimadeiras has in place its own control system to evaluate and record species diversity on operations areas. Special attention is given to the National System of Classified Areas (SNAC) and to the Important Bird and Biodiversity Areas (IBAs).</p>
<p><b>Risk Rating justification</b></p>	<p>Forest operations are identified in the National Report on the Implementation of</p> <p>Directive Habitats and Birds to present threat (present situation) in 6 habitats and pressure (future) on 8 habitats accounting for 3.8% and 5%, respectively, of the total assessments. A similar assessment was performed, having species (except birds) as the scope and the numbers do not differ much. Forestry presents a threat to 7.7% of the species assessed and puts pressure on 9.6% of the total 426 species considered. Forest activities have impact on bird attributes with 30% of the assessed species demonstrating to be threatened.</p> <p>High Conservation Values (HCV):</p>

HCV1:

As described above, there are identified threats and pressures from forestry activities on species and birds. The specific species that might be affected by forestry activities are identified in the report of the application of the Birds and Habitats Directive. Several legal instruments protect areas of significant biological diversity: planos de ordenamento de áreas protegidas (POAP), planos regionais de ordenamento florestal (PROF), planos directores municipais [town planning] (PDM),

plano de gestão florestal (PGF), and, in the case of classified areas, a programa de gestão da biodiversidade [biodiversity management programme] (PGB). Regarding the establishment of projects and programmes aiming to enhance the conservation status of HCV, the LIFE Programme has facilitated the development of a series of projects in Portugal. A series of documents is also produced, from simple brochures to manuals of good practice (an example being the conservation manual for the

Bonelli's eagle and the good forestry and hunting practice manual). Some projects include action plans for species conservation. Most projects have as their objective the conservation of potential HCV 1 species, being carried out by Natura2000 Network. Some NGOs, such as Sociedade Portuguesa para o Estudo das Aves (SPEA) [Portuguese Society for the Study of Birds], have formed working groups to monitor species, such as the Bonelli's eagle working group (GTAB) and the night birds working group (GTAN). Furthermore, various good practice manuals, leaflets and other relevant information sources are available in the public domain, published by different institutions.

HCV2:

Montados of cork and holm oaks Landscape classified as HCV2 has potential threats that may cause the decline of montado (biotic and abiotic factors, lack of forest management), but the measures available to protect Montados are considered effective, resulting in an increase of 6% of the cork oak area from 1995 to 2010. [National Forest Inventory 6, Preliminary results]. Existing safeguarding measures include:

- the application of current legislation (planning, projects and protection against felling). This legislation is well consolidated and disseminated by the various agents involved (owners, managers, and operators); and
- a network of Research & Development dedicated to defining and operationalizing good management practices.

Furthermore, national scale management programs have been implemented (beneficiation, afforestation, and reforestation) to recover cork oak populations, both in terms of area and in tree health. The regulation

implemented in Portugal on oak and holm trees and stands, includes a comprehensive legislative framework with a legal action planning and project but also cuttings protection. This legislation also meets forest management measures themselves related to intensity of exploitation, such as stripping and pruning. This regulation is well established and promoted. It has been assimilated by the several agents involved such as owners, managers, and operators. The awareness of operators for planned forest management and the certification of sustainable forest management has been increasing in Portugal in recent years. Certified forest of cork and holm oak account for an estimated 236 000 ha. Following several surveys on the conservation status of cork and holm oak stands, several actions have been developed in order to improve forest management practices, which were promoted by the entities involved. This includes a variety of contents and formats such as codes of good

practices for cork oak forests but also pest and disease identification guides. More

recent investment lines have been created supported by EU grants to assist owners and managers in pest monitoring of cork and holm oak stands (Operation 8.1.3 - Prevention of forest against biotic and abiotic agents) and for health recovery and restoration of forest stands of cork oak (Operation 8.1.4 - forest restoration affected by biotic and abiotic agents or catastrophic events). The most current detailed results achieved by management and improvement actions on forest stands are not fully known, since the full values of the last national inventory (IFN6) are still missing however, it is known that the class of "wooded area with cork oak" showed an increase of 6% from 1995 to 2010, and holm oak decreased 3% in the same period.

HCV 3:

Referring to the Information in the sectorial plan of Natura2000 and in the Third National Application Report of the Habitats Directive (2007–2012), specified risk is identified for habitats that are subject to threats originating from forestry activities. The Natura 2000 network database was updated in 2015 and it contains relevant information about the assessment of each habitat for each Common Importance Site. Furthermore, Portugal approved its ratification of the Convention on Biological Diversity (CBD) via DL No. 21/93, June 29th, which became effective on 21st March 1994. The Fifth National Report to CBD had as its main objective a review of implementation of the Convention and an assessment of how far we had come in achieving CBD objectives and the Aichi Biodiversity Targets contained in the Strategic Plan for Biodiversity 2011–2020. It also contributed to the development of the Global Biodiversity Outlook report and the review of the fulfilment of the EU Biodiversity Strategy for 2020. The report covers the state and tendencies of

biodiversity and detected threats, reporting on actions taken towards fulfilling the Aichi Biodiversity Targets and finally sets out, based on experience, topics

most deserving of attention in order to achieve a more adequate and broad-reaching implementation of the CBD's COP (Conference of Parties) decisions in Portugal.

HCV 4:

In Portugal there are several instruments related to the conservation of river basins, soil conservation, and protection against the risk of fire. In the case of river basins, information relating to the classification of flood plains, areas threatened by floods and other relevant information can be partially obtained by consulting areas included in the REN. River basin plans also contain information that may be relevant, as do PROFs, especially where they refer to protection forests. For information about erosion control it is essential to consult documentation relevant to the risk of erosion. Some of this information is contained in the REN, which

identifies, on a scale of 1:25.000, areas at high risk of erosion, as well as zones of instability. Areas of high fire risk are identified in fire risk maps (ICNF) and in municipal forest fire plans. Within the national context, the structure of property,

being extremely fragmented, reduces the dependence on ecosystem services and means this is not critical. Furthermore, the probability of forest management activities having a significant impact on the same service is negligible. Several legal instruments safeguard the functions of protection and regulate intervention in these areas. Examples of this are the Water Law, river basin plans (PBH) , public waters and dams planning (POAAP) , National Ecological Network , the Land Law, etc.

HCV 5:

Not applicable to Portugal Mainland. In Portugal, the use and enjoyment of common forest land is regulated (Lei dos Baldios [common land law] – Decree-Law No. 165 /2015, 17th August). At present, this land is not indispensable to provide the basic needs of the adjacent communities.

HCV 6:

The criteria for identifying HCV 6 for Portugal are based on international or legal frameworks that already foresee the safeguards needed to protect/maintain the cultural values identified. At the same time, it is considered that the values are legally recognized and enforced.

Relevant forest ecosystems comprising primary, natural and semi-natural forests are protected by the Fundamental Network for Nature Conservation (RFCN) defined by Decree-Law No. 142/2008, which integrates the core areas of nature and biodiversity conservation:

- National Network of Protected Areas (RNAP);
- SICs and ZPEs of the Natura2000 network;
- Other areas classified under international commitments assumed by the Portuguese State (namely, Biosphere Reserves, Ramsar Sites and Geoparks); and continuity areas, safeguarded by the respective legal regimes:
  - National Ecological Reserve (REN);
  - National Agricultural Reserve (RAN);
  - Public water domain (DPH).

The continuity areas of the RFCN establish or safeguard the connection and the genetic exchange of populations of wild species between the different core conservation areas, contributing for the adequate protection of natural resources, to the promotion of spatial continuity, ecological coherence of classified areas and for the biodiversity components connectivity's throughout the territory in terms of the respective legal regimes. Decree-law 140/99 (republished in the Decree-law 49/2005 and amended by Decree-law 156-A/2013) transposes the Birds and Habitats directive, defines the legal protecting species' regime, including several restrictions and prohibitions. Decree-Law 242/2015 prohibits land use change in protected areas as well as it prohibits the disturbances or destruction of the menaced species and their habitats.

Forest owners make use of voluntary certification schemes recognized worldwide like Forest Stewardship Council (FSC) and Program for the Endorsement of Forest Certification (PEFC), or adopt practices in line with the "guidelines for sustainable forest management", based on the work of the Technical Committee for Standardization No. 145/IPQ (Portuguese Standard NP 4406/2003) which applies

pan-European criteria for the sustainable forest management as well as operational level guidelines. There are, simultaneously, several private companies that have been developing initiatives in order to promote the sustainable management of forest through the creation of forest owners' groups willing to apply best management practices in their properties, and supporting them with preparation to apply for the certification with independent certification bodies.

	The risk is designated as specified (HCV 1 and HCV 3) on private and communitarian areas, and in public areas not managed by ICNF, as there species diversity, ecosystems and habitats could be harmed by forest operations if not evaluated.

	<p>Unimadeiras has in place its own control system to evaluate and record species diversity on operations areas.</p>
<p><b>Risk Rating justification</b></p>	<p>Portuguese Forests are well surveyed and all major HCV are identified. The National System of Classified Areas (SNAC) is defined in the Legal Regime of Nature Conservation and Biodiversity (RJCNB), being constituted by the National Network of Protected Areas (RNAP), by the classified areas that make up the Natura 2000 Network and by the other areas classified under international commitments assumed by the Portuguese State (RAMSAR, Man and the Biosphere, etc.).</p> <p>The National Strategy for the Conservation of Nature and Biodiversity 2030 (ENCNB 2030), approved in 2018, pursues a long-term vision based on three interdependent strategic axes:</p> <ul style="list-style-type: none"> <li>- Improve the conservation status of the Natural heritage,</li> <li>- Promote the recognition of value natural heritage; and</li> <li>- Promote the appropriation of natural values and biodiversity by society.</li> </ul> <p>ENCNB 2030 thus proposed the objective of consolidating the national system of classified areas and ensuring its management, to which it associated several achievements, namely on:</p> <ul style="list-style-type: none"> <li>- the achievement of goal 17 of Aichi and 14.5 of the SDGs through the consolidation of the network of SNAC marine areas;</li> <li>- the creation of a network of geo-sites to integrate the national system of classified areas and ensure geo-conservation in territorial management instruments, and;</li> <li>- the development of management plans or equivalent instrument for all important sites of the Natura 2000 network.</li> </ul> <p>Currently there is sufficient information concerning HCV forest location. No major gaps in knowledge about HCV existence and data about biodiversity is updated regularly. Preservation programs for HCV's:</p> <p>HCV 1 – Species diversity: concentrations of biological diversity including endemic species, and rare, threatened, or endangered species that are significant at global, regional, or national levels.</p> <p>1. Classified areas: Classified areas protected by the “Rede Nacional de Áreas Protegidas” (RNAP) and the Rede Natura2000 covers around 20 per cent of Portugal’s mainland territory. Classified areas comprise RNAP protected areas, sites from the national list [which includes sites of community importance (SICs)] and the “Zonas de Proteção Especial para Aves” (ZPE) (Special Protection Areas for Birds) of the Natura2000 network. Municipal</p>

protection areas must also be considered. Other classified areas are also protected by international commitments agreed upon by the Portuguese state (e.g., Ramsar Convention sites, biogenetic reserves, biosphere reserves). Although not included in classified areas, other areas fit this umbrella, such as Important Bird Areas (IBAs), sites of international importance for the conservation of birds on a global scale.

2. Endangered species according to the classification adopted by the International Union for the Conservation of Nature (IUCN) to endangered species:

- Critically endangered (CR)
- Endangered (EN)
- Vulnerable (VU).
- Protected species within the legal conservation instruments in force in Portugal . <https://icnf.pt/conservacao/redenatura2000/diretivaaves>
- . CITES Bern Convention Bonn Convention
- . <https://icnf.pt/conservacao/especies/livrovermelhosvertebrados>
- . Red book and Atlas of Bryophytes <https://icnf.pt/conservacao/especies>

3. Endemic species: The Mediterranean basin, in which Portugal is found, contains around 25,000 species of plants, 50 per cent of which are endemic to the region. Of almost 4,000 species of flora listed for Portugal (mainland, Azores, and Madeira), around 450 are Lusitanian endemism (143 on the mainland), and 346 are endemic to the Iberian Peninsula. 3,314 species of flora are listed for the mainland. 150 endemism (species that do not exist else-where) are found in the mainland. As for invertebrates, information is scarce, but there are statistics for insects: so far, 402 taxa have been registered (369 species and 33 subspecies) which are recognized as Lusitanian endemism (Carapeto A., Francisco A., Pereira P., Porto M. (eds.). (2020). Lista Vermelha da Flora Vascular de Portugal Continental).

4. Critical areas of seasonal use: including critical areas of refuge, breeding or migration routes in Portuguese territory: Fauna species may use different types of habitats depending on their life cycle and the season. These habitats can be critical for their importance in the reproductive season or for the availability of food in certain seasons. This designation focuses on the importance of these areas for fauna. Digital mapping information from the Manual das Linhas Eléctricas [Manual of Electric Lines] is also used, for reference purposes only, as its scope is limited in this field. This identifies:

- Autumnal bird migration corridors in south-west Alentejo and the Vicentina coast;
- Zones of concentration and passage for steppe birds (great and little bustards);
- Nesting areas for birds of prey with threatened status;
- Concentration of winter birds in wetlands;
- Shelters for bats, considered important at national, regional, and local level.
- As for invertebrates, information is scarce, but there are statistics for insects: so far, 402 taxa have been registered (369 species and 33 subspecies) which are recognized as Lusitanian endemism.

The vertebrate species identified as threatened are listed and described in the Redbook of Vertebrates from Portugal. Similar assessment has been done for Bryophytes in the Redbook of Bryophytes. A study aimed to identify and list the threatened flora is being developed at this moment.

HCV 3 – Ecosystems and habitats: rare, threatened, or endangered ecosystems, habitats or refuge.

1. Habitats Directive (2007-2012) Covers habitats listed in the Habitats Directive (Annex I) which, in the last national Habitats Directive report (2007–2012), were listed in categories (U1) – unfavourable inadequate – and (U2) – unfavourable bad.

2. Natura 2000 database Natura2000’s sectorial plan is the main source of information used to identify habitats in classified areas. In the case of non-classified areas, the Habitats Directive implementation reports can be consulted for information on habitat conservation (favourable, unfavourable inadequate, unfavourable bad). Portugal approved its ratification of the Convention on Biological Diversity (CBD) through Decree-Law No. 21/93, dated 29th June, which became effective in our country on 21st March 1994.

In Portugal, HCV3 are the habitats listed in the Habitats Directive (Annex I) which, in the last national Habitats Directive report (2007–2012), were listed in categories (U1) – unfavourable, inadequate – and (U2) – unfavourable bad. Natura2000’s sectorial plan is the main source of information used to identify habitats in classified areas. In the case of unclassified areas, the Habitats Directive implementation report can be consulted, in particular for information on the national distribution of natural habitats (information available only at 10x10km scale), their conservation status (favourable, unfavourable, inappropriate, unfavourable, un- known) and major threats. In the case of a Forest Management Unit in protected areas, the Protected Area Spatial Plans will be the main source of information. The Fifth National Report to CBD had as its main objective a review of implementation of the Convention and an

	<p>assessment of how far we had come in achieving CBD objectives and the Aichi Biodiversity Targets contained in the Strategic Plan for Biodiversity 2011–2020. It also contributed to the development of the Global Biodiversity Outlook report and the review of the fulfilment of the EU Biodiversity Strategy for 2020. The report covers the state and tendencies of biodiversity and detected threats, reporting on actions taken towards fulfilling the Aichi Biodiversity Targets and finally sets out, based on experience, topics most deserving of attention in order to achieve a more adequate and broad-reaching implementation of the CBD’s COP (Conference of Parties) decisions in Portugal.</p> <p>There is a clear and monitored system by competent authorities to control forestry activities planned in new plantations until timber exploitation, which minimizes the risk of forestry operations affecting conservation objectives in the biomass origin areas managed.</p> <p>Considering that some tree species are the basis for important habitats that are present outside protected areas, namely, Quercus spp., Alnus spp., Fraxinus spp, Salix spp., and others, it’s relevant to access the presence of these species in the biomass supply base.</p> <p>The risk is designated as specified for non managed forest and for species covered by Annex I of Habitat Directive.</p>
<b>Risk Rating</b>	Specified Risk

Portugal Mainland	Indicator
<b>2.2.1</b>	Feedstock shall not be sourced from land that had one of the following statuses in January 2008 and no longer has that status due to land conversion: a. Forests b. Wetlands c. Peatlands d. Highly biodiverse grasslands.
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Law No. 33/96, 17/08 – Forest Policy Base Law.</li> <li>- Decree-Law No. 242/2015;</li> <li>- Law No. 58/2005, 29/12;</li> <li>- Law No. 54/2005, 15/11 (Artº 25º);</li> </ul>

	<ul style="list-style-type: none"> <li>- Decree-Law No. 173/88, May 17th;</li> <li>- Law No. 77/2017 August 17th, reviews the RJAAR, capping the expansion of eucalyptus area in Portugal;</li> <li>- Decree-Law No. 92/2019, July 10;</li> <li>- Decree-Law No. 142/2008, amended by Decree-Law No. 242/2015, 15th October: Fundamental Nature Conservation Network (RFCN);</li> <li>- Change of dominant species in forest areas applied to Portugal’s mainland: Decree-Law No. 96/2013, July 19th;</li> </ul> <p>Specific legislation comprising the protection of:</p> <ul style="list-style-type: none"> <li>- Cork and holm oak: Decree-Law No. 169/2001, amended by Decree-Law No. 155 /2004, 30/06;</li> <li>- Riparian vegetation: Law 58/2005 and Law 54/2005;</li> <li>- Holly: Decree-Law No. 423/89.</li> </ul> <p>LEGISLATION ENFORCEMENT:</p> <p>The latest RJAAR informative report summarizes the relevant statistical data about the application of this legal framework: 16% of the reforestation activities comprising the change of species, in the period of the assessment, consisted of Pinus Pinaster converted to Eucalyptus. 4% of the referenced activities comprise the plantation of Eucalyptus in areas occupied by other, non-specified, species. This informative note also demonstrates that this law is being actively applied, with 2,091 civil proceedings since 2013. The lack of either previous formal authorization or previous communication for afforestation and reforestation activities is the most common non-conformity with 88% of the total cases.</p> <p>Unimadeiras promotes itself and to its suppliers, the use of good forestry practices. Unimadeiras suppliers are either certified FSC, PEFC or both. Unimadeiras does not accept as SBP-compliant feedstock wood from forests converted to non forest use, as well as feedstock coming from riparian vegetation.</p>
<p><b>Risk Rating justification</b></p>	<p>Portuguese forest is defined by its recent origins and by heavy human intervention. In general, the Portuguese forest is recent. In Europe, Portugal is the country in which the transition from deforestation to reforestation occurred most rapidly: forest covered 4 to 7 percent of the mainland in 1870 and increase to cover more than 30 per cent in less than 100 years. Since the definition of forest is too broad, a more specific approach is considered in this assessment, using the wording of the FSC forest management standard for Portugal (approved by FSC on 18th February 2016) which is as follows:</p>

“Criterion 6.9 - The Organization shall not convert natural forest to plantations, nor natural forests or plantations on sites directly converted from natural forest to non-forest land use...”, in which natural forest are described as: “Forest areas where many of the principal characteristics and key elements of natural ecosystems such as complexity, structure, soil properties, and biodiversity are present, and where all or most of the trees are indigenous. Natural forests can include forest areas where forestry or other interventions occur, coming from a combination of natural regeneration and artificial regeneration, composed by local indigenous species in which many of the characteristics of natural forests are present. Natural forests do not include:

- Areas where the vegetation is not dominated by trees;
- Areas that were not previously forested;
- Areas that do not yet contain many of the characteristics and elements of native ecosystems.”

FSC forest management standard for Portugal is also here used for the definition of “plantation”: “Forested area resulting from plantation or sowing, with the objective to produce timber or non-timber products, that can be composed by indigenous and non-indigenous species and include one or more of the following characteristics:

- Reduced number of species;
- Intensive forestry;
- Regular plant spacing;
- Regular stands”;

FAO’s Global Forest Resources Assessment, 2020, shows the following data regarding the Portuguese forest area (3312 kha):

- Primary forest: 0.8%;
- Naturally regenerated forest: 31% (1056 kha);
- Forest with the primary designated function of production: 59%;
- Forest within protected areas 20%;
- Planted forest 68% (2256 kha).

Relevant forest ecosystems comprising primary, natural and semi-natural forests are protected under the Fundamental Nature Conservation Network (RFCN), which led to establish the “Sistema Nacional de Áreas Classificadas” [National Classified Areas System], which comprises the major areas of

environmental conservation and biodiversity: i) RNAP; ii) SICs and ZPEs of the Natura2000 network;

iii) any other areas classified under the umbrella of international commitments agreed upon by the Portuguese state; and areas of continuity: i) REN; ii) RAN  
 iii) DPH (public hydric domains), safeguarded by the respective legal regulations. Furthermore, the overall dynamics of the Portuguese forest cover is not promoted or supported by the demand of biomass. Simultaneously, the development of forest energy crops is not permitted in Portugal, through several legislation limitations, namely the mandatory previous authorization for premature final cutting of Eucalyptus and Pinus pinaster stands, regulations for the introduction and environmental control of non-indigenous species and mainly the mandatory previous authorization for afforestation and reforestation activities using short rotation crops (Decree-Law No.175/88 from May 17th). Changing land cover in protected areas is prohibited by Article 43 of Decree-Law No. 242/2015, as well as the disturbance or destruction of threatened species and their habitats, under Article 44. There is also legislation considering the change of dominant species in forest areas applied to Portugal's mainland. This establishes the legal framework, for afforestation and reforestation actions (RJAAR - Legal Framework for Afforestation and Reforestation Actions). Any afforestation / reforestation, independently of the area of intervention, that alters the dominant species previously installed is subject to previous authorization by the ICNF. It's important to highlight that article No.9 of RJAAR defines that if an intervention occurs inside the National Ecologic Reserve, a consultation must be performed at the relevant CCDR and municipality. Article No.10 defines the factors that should be taken into account in the decision-making process including the protection of forest against forest fires, hydric related issues, biodiversity and habitat protection, amongst others. Reforestation actions using eucalyptus can only be done in the following cases:

- In areas where the previous dominant species was Eucalyptus;
- As compensation of areas with Eucalyptus stands that were relocated to more productive sites.

There is also specific legislation comprising the protection of cork and holm oak, riparian vegetation, and holly.

Conclusions:

- Portugal has a very small area that fits under the definition of Natural Forest.
- It is safe to consider that primary, natural and semi-natural forest ecosystems have a strong and upheld protection framework.
- The majority of the stands of Pinus pinaster, Eucalyptus, Pinus pinea and even Quercus suber are originated from afforestation activities for timber

	<p>production and non-timber products and, thereby, are not considered as natural forest.</p> <ul style="list-style-type: none"> <li>- Change in forest cover is possible, but previous communication or authorization must be submitted to forest authorities (ICNF).</li> <li>- Specific tree species are protected and can only be cut with previous authorization from ICNF (Cork Oak, Holm Oak).</li> <li>- Several legal mechanisms and monitoring practices are put in place in order to control forestry activities in sensitive areas.</li> </ul> <p>According to the National Inventory Report on Greenhouse Gases 1995-2015 developed by Portuguese Environment Agency (APA), Portuguese forest acted as a carbon sink in the period of the study with a net carbon sequester of 753.2 Gigagrams. The high carbon stocks are considered to be in wetlands, peatlands (no forested areas related) and old mature forests stands. Information regarding wetlands in Portugal states that as usual in the region they are threatened ecosystems even when they are protected. Portugal currently has 1.8% of its territory occupied by wetlands, 79% of which is protected by the Ramsar Convention, covering this protection figure of 31 sites (about 132,487 ha). 82% of habitats related to wetlands are degraded. Epic WebGis Portugal provides geographical information about wetlands.</p> <p>Considering the positive general trend of carbon accumulation by forests in Portugal, this indicator has a regional to local (exceptional) character. The most relevant risk for carbon stocks associated to forestry are the operations harvesting of riparian vegetation in wetlands. So specified risk needs to be assessed on this aspect.</p>
<b>Risk Rating</b>	Specified Risk

<b>Portugal Mainland</b>	<b>Indicator</b>
<b>2.2.2</b>	Ecosystems, their health, vitality, functions and services in the Supply Base shall be maintained or enhanced.
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Law No. 33/96, August 17th – Forest Policy Base Law.</li> <li>- Birds and Habitats Directive Implementation Reports: <a href="https://icnf.pt/conservacao/redenatura2000/diretivaaves">https://icnf.pt/conservacao/redenatura2000/diretivaaves</a></li> <li>- Decree-law No. 96/2013: <a href="https://dre.pt/application/file/a/497960">https://dre.pt/application/file/a/497960</a></li> </ul>

	<ul style="list-style-type: none"> <li>- Decree-law No. 151-B, October 31st;</li> <li>- Regional Forest Planning (PROF): <a href="https://icnf.pt/florestas/prof">https://icnf.pt/florestas/prof</a></li> </ul> <p>Unimadeiras promotes itself and to its suppliers, the use of good forestry practices. Unimadeiras suppliers are either certified FSC, PEFC or both.</p>
<p><b>Risk Rating justification</b></p>	<p>Forest areas and HCV are well identified and mapped, and threats from forest management are identified and addressed, and are covered by a strong legal and monitoring framework. Simultaneously, there is an extensive list of communication actions and informative documentation available on the ICNF web page showing that efforts were made and are being made in order to promote best practices regarding the improvement of forest health. The Program for Rural Development 2014-2020 (PDR2020) has a line of financial support available for operations related to the safeguarding of the forest against biotic and abiotic agents. Forests occupy 23% of the National Network of Protected Areas (RNAP). Within RNAP, there are a total of 45 visiting structures managed by ICNF capable of generating annual visits of approximately 290,000 people.</p> <p>Portuguese mainland has 231 forest equipment for recreational purposes and 14 (peri)urban forest parks managed by ICNF. There are best practices put in place and promoted through forest associations, municipalities, industrial parties among others. There are monitoring results, examples of law enforcement and implementation reports related to the main diseases and pests. The Portuguese legal framework covering these aspects is robust but the diversity (of aspects) covered by this indicator and the ownership of the Portuguese forest, mostly small size private properties, makes it difficult to ensure that all territory complies with this indicator. In the evolution of land use, according to data from the Portuguese Directorate-General for Territorial Planning, the analysis of the distribution of land uses and occupations by NUTS II confirms the high proportion of forested areas in the Centro region, the significant presence of forests in all regions, including Lisbon (the metropolitan territory), and in Alentejo region, typically associated with the dominance of agroforestry systems. Algarve and North regions have a considerable proportion of their territories occupied by scrubland, reflecting the lack of land use for productive activities with market value, but ensuring an important reserve for nature conservation and biodiversity. These areas are crucial for maintaining ecosystem services and essential for the sustainability and quality of life not only in the region but also in larger territories. It is important to highlight that forest operations are identified in the Habitats Directive Implementation Report from Portugal to present a “high importance” threat (future) in 6 habitats and pressure (current) on 8 habits accounting for 3.8% and 5%, respectively, of the total assessments.</p>

	The risk is designated as specified for not managed forest areas.
<b>Risk Rating</b>	Specified Risk

Portugal Mainland	Indicator
<b>2.2.3</b>	Soil quality in the Supply Base shall be maintained or enhanced
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Law No. 33/96, August 17th – Forest Policy Base Law;</li> <li>- Law No. 31/2014, May 30th, defines the general basis for the public policy on soils, territory planning and urbanism and sets a goal of enhancing the potential of agricultural, forestry and forest areas, among other broader objectives.</li> <li>- Decree-Law no. 96/2013, and several other diplomas published afterwards: Regulation of afforestation and reforestation actions in Portugal mainland territory;</li> <li>- Ordinance No. 15-A/2018, January 12th: technical standards to be considered within the scope of the preparation of afforestation and reforestation projects.</li> </ul> <p>Unimadeiras promotes itself and to its suppliers, the use of good practices applied to soil preparation, maintenance, harvesting and transport within the forest.</p> <p>Unimadeiras suppliers are either certified FSC, PEFC or both. Best practices and soil conditions are checked.</p>
<b>Risk Rating justification</b>	<p>Since 1901, with the establishment of the Forest Regime, the maintenance of soil quality, as well as its fixation, was identified as a strategic objective for the improvement of forest health and forest services. Forest Regime was constantly developed throughout the 20th century being the final iteration, the Forest Law Base Policy, which determines that the national forestry policy pursues the objective of “... ensuring the fundamental role of forests in regulating water resources, soil conservation and air quality, and fighting desertification.”. National Forest Strategy (2015) states (chapter 2.2.5): “The susceptibility to desertification, which in terms of the Convention is defined by the aridity index threshold and, in particular in Portugal, corresponds to the ‘Semi-arid’ and ‘dry sub-humid’</p>

classes, covers 58% of the mainland in the last three decades (1980/2010) and 63% in the last decade (2000/2010). More than 60% of the national forest area estimated by IFN6 is included in areas susceptible to desertification including 100% of holm oak area, 99% of the area of cork oak, 98% of Pinus pinea and 100% of the carob tree. Still from the same chapter of the National Forest Strategy: “It should also be noted that in the last decade there has been a significantly positive trend on the recovery of the productive capacity of Portuguese soils – in 22% of the mainland area– thus a regression in the desertification trends, including, in this scope, 5% of degraded areas, 9% of areas under production and 6% of naturalized areas, on a large

extent related to new afforestation, since more than 90% of new afforestation interventions were carried out in areas susceptible to desertification (data from IFN).” ICNF report “Forest adaptation to climate change” (2013) prior to the development of the National Forest Strategy of 2015, states the following on page 57: “Technical studies for the assessment and monitoring of the soil status that have been developed as a support for the revision of the PANCD (National Action Plan Against Desertification), show that 28% of the areas susceptible to desertification are degraded. Nevertheless, monitoring of the soil conditions over the period 2000-2010 shown a positive evolution of soil status on susceptible areas – 22% recovered its primary productivity and only 1.1% presented a negative trend.”

Legislation on public policy on soils, territory planning and urbanism sets a goal of enhancing the potential of agricultural, forestry and forest areas, among other broader objectives. Regarding territory planning sets the objective:

“The preservation of soils with potential for agriculture, livestock or forestry, nature

conservation, tourism and leisure, the production of renewable energies or the exploitation of geological resources in such a way that the allocation of such soils to other uses is restricted to situations where it is effectively needed and is duly proven.”. 6th National Forest Inventory [IFN6, page 48, table 409.PTC] comprises data about soil quality based on indicators such as signs of erosion, grade of compaction of soil as well as causes of compaction, on specified forest species stands. Signs of erosion were identified on 1% of Pinus pinaster areas, 1% of Eucalyptus globulus areas, as well as 1% of Pinus pinea areas. The grade of compaction is divided into three categories: Null, Reduced and High. The grade of compaction in 92% of the soils where Pinus pinaster is found presented a Null grade of soil compaction. For Eucalyptus, this percentage drops to 80% of the areas and, in the case of Pinus pinea, the percentage of the forested area showing no signs of soil compaction was 78%. At a macro level, on which the inventory relies, the risk of

forest operations on soil quality is low. Soil is a critical natural asset for forest operations and, despite the existing good practices, stakeholders report

	<p>inadequate soil preparations for plantation and as well as inadequate management of soils on areas affected by forest fires.</p> <p>The diploma of afforestation and reforestation actions, and several other diplomas published afterwards, in mainland territory establishes, in its article 10, that the authorization request and the prior communication regarding the afforestation and reforestation actions and the analysis and decision process must be based, among other aspects, on norms and good soil preparation practices, as well as the constraints on techniques for installing forest stands and other guidelines for regional forest management programs, specific forestry intervention plans and forest management plans. In 2018, the essential technical standards to be considered within the scope of the preparation of afforestation and reforestation projects, the respective analysis and decision process, and their execution, were definitively established, through the respective legislative publication. These technical standards concern the distances of afforestation and afforestation to be safe-guarded to neighbouring buildings at the time of installation of new forest stands, regardless of their use and without prejudice to the application of all others arising from specific legislation, namely in the field of forest protection against fires, the conservation of nature and biodiversity, the defence of soils and water resources.</p> <p>Considering the information reviewed, although positive trends were verified in the latest assessments on soil quality, climate change and land use are emerging realities and this indicator is considered as specified risk.</p>
<b>Risk Rating</b>	Specified Risk

<b>Portugal Mainland</b>	<b>Indicator</b>
<b>2.2.4</b>	Where the removal of harvest forest residues and/or stumps occurs, this shall not lead to irreversible negative impacts to the ecosystem.
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Decree Retif. n. ° 38/2015, 1/09 Decree-Law No. 123/2015, 3/07 Decree-Law No. 95 /2011, 8/08;</li> <li>- Decree-Law No. 154/05, 6/09 Decree No. 30-A/2011, 7/10;</li> <li>- Decree Law No. 84/2022 sets out the targets for the consumption of energy from renewable sources, supplementing the transposition into national legal order of the European Directive on the subject.</li> </ul>

	<p>LEGISLATION ENFORCEMENT:</p> <ul style="list-style-type: none"> <li>- GNR (SEPNA).</li> </ul> <p>In 2022 GNR, through SEPNA, carried out an operation aimed at the inspection of vehicles transporting coniferous timber and timber products called “Resina 2022”. GNR monitored 22240 vehicles transporting coniferous material, such as pallets, planks, beams, trunks, plants, woodchips and other derivatives, and 30 violations were detected.</p> <p>Unimadeiras has in place procedures to ensure that residues removal complies with legality and is adequate for forest sustainability:</p> <ul style="list-style-type: none"> <li>- Best forestry practices;</li> <li>- Feedstock suppliers are trained to perform forest operations considering the soil protection and the forest sustainability.</li> </ul>
<p><b>Risk Rating justification</b></p>	<p>In Portugal forest residue removal from forests is regulated so loggers and owners have some legal obligations, related with both fire and phytosanitary policies. These obligations are dependent on species, areas, seasons and regions. Depending on forestry procedures and forest models, the solutions adopted about forest residues are:</p> <ul style="list-style-type: none"> <li>- integrating them in the soil;</li> <li>- removing them, or;</li> <li>- burn them in the appropriate season.</li> </ul> <p>All of these operations include advantages and disadvantages according to the focus of the overview. In case of removal, it is always considered a harm to the remaining forest, soil, fauna and flora. Process of forest residue removal is commonly included on Best Practices but also on wood supply contracts, and forest land leasing.</p>
<p><b>Risk Rating</b></p>	<p>Low Risk</p>

<p><b>Portugal Mainland</b></p>	<p><b>Indicator</b></p>
<p><b>2.2.5</b></p>	<p>Quality and quantity of ground water, surface water and water downstream shall be maintained or enhanced.</p>
<p><b>Supply Base Verifiers</b></p>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Law No. 33/96, August 17th – Forest Policy Base Law;</li> </ul>

- Water Law: Dec-Law No. 130/2012, 22/06:

<https://dre.pt/application/dir/pdf1sdip/2012/06/12000/0310903139.pdf>

- Decree-law No. 173/88, May 17th establishes the definition of premature cutting operations on Eucalyptus and Pinus Pinaster stands and defines limitations for these operations.

- Decree-law No. 139/89, April 28th establishes the legal framework for the protection of natural slope, arable soil and vegetation cover.

- Decree-law No.151-B, July 19th defines the obligation to perform an Environmental Impact Assessment on every afforestation and reforestation occurring in areas  $\geq 350$ ha (70ha in sensitive areas) or  $\geq 140$ ha (30ha in sensitive areas) if the subject area, in conjunction with pre-existent forest stands of the same species, separated by less than 1 km, would produce a continuous forested area of more than 350ha (70ha in sensitive areas). It also establishes that an Environmental Impact Assessment must be done when there is a deforestation action in areas  $\geq 50$ ha (10ha in sensitive areas).

- At a regional level, Municipal Forest Regulations define the permitted operations near water lines considering the potential hazard of erosion, fire propagation and water displacement, namely:

- . Species allowed near water lines and riparian galleries, excluding fast growing species from afforestation and reforestation activities -Ordinance No.528/89, July 11;

- . Mandatory low density of stands on afforested and reforested areas;

- . Advice on the species considered as appropriate to a defined location;

- . Use of heavy machinery limited to no less than 10 meters from the water line;

- . Clear cutting operations and management activities must be previously authorized by the municipality.

Unimadeiras has in place procedures to ensure that water is not negatively affected by harvest operations:

- Best forestry practices;

- Feedstock suppliers are trained to not contaminate ground water and to plan forest management operations that protect the soil, forest and surroundings

from surface water runoff.

### Risk Rating justification

Forests have a positive impact on water resources, compared with other land uses, such as agriculture. In the case of river basins, information related to the classification of flood plains, areas threatened by floods and other relevant information can be partially obtained by consulting areas included in the National Ecologic Reserve (REN). River basin plans (PGBH) also contain relevant information, as do PROFs, especially where they refer to protection forests. For information of erosion control it is essential to consult documentation relevant to the risk of erosion. Some of this information is contained in the National Ecological Reserve (Reserva Ecológica Nacional - REN), which identifies, on a scale of 1:25.000, areas at high risk of erosion, as well as zones of instability. National Ecological Reserve is a territory classification of sensitive areas for “ecosystem services” where water issues are addressed, and some restrictions are in place to prevent negative impact in slopes, valleys and other sensitive situations. All forest projects and plans must comply with this regulation, and they should be in place, for example in projected soil preparation techniques. The ICNF Handbook for forest best practices defines: “In the areas surrounding the water lines the risk of erosion is often very high, since these are areas of concentration of rainwater runoff. In these bands (with a minimum width of 10 metres on either side, as stated in the legal definitions and conditions of legal limits (Decree-Law No. 468/71, of 5th November) a strict prevention of erosion phenomena shall be performed, and it is therefore essential to adopt measures to protect it, such as maintaining all or a significant part of the spontaneous vegetation and not perform any mobilization of the soil.” A typical distribution of the forest private property in several regions of the Portuguese mainland where only Alentejo and Ribatejo regions show an average property size above 7ha per owner and more than 50% of the properties with more than 100 ha. For properties with dimensions above 100 ha it is mandatory to prepare and submit a Forest Management Plan to be analysed by ICNF which comprises strategies to minimize impact on water resources created by forest operations. The forest operations occurring in other regions of the country, mainly above the Tagus river, where more than 50% of the properties have less than 10 ha and average sizes ranging from 1.46 to 2.83 ha per owner, will unlikely spread across areas greater than 10h, due to the fragmentation of the rural real estate. PROF in northern regions (21% of the territory) defines a maximum area for clear cuttings of 10ha.

There are forestry best practices handbooks for operations occurring on river basins and forest areas near dams easily accessible online and through forest owners’ associations, as well as a strong legal framework regarding operations within the mentioned areas. At the same time, North of the Tagus river, where the implementation of Forest Management Plans is not as visible as in the southern region of Portugal, the average property size is considerably small, which reduces the risk for this indicator. So it is considered there are specified risks that feedstock is sourced from forests when clear cuttings are done over a specific size area. This specific area is defined regionally by each Regional Forest Plan (PROF), as the maximum clearcutting area or the size of even aged monospecific forest stand.

<b>Risk Rating</b>	Specified Risk
--------------------	----------------

<b>Portugal Mainland</b>	<b>Indicator</b>
<b>2.2.6</b>	Air emissions shall comply with national legislation or in the absence of national legislation with industry best practice.
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Law No. 19/14, 14/04; Artº 10ºd);</li> <li>- Decree-Law No. 49/05, 24/02; Artº 20º</li> <li>- Decree-Law No. 197/2005, 8/11; artº 1º, No. 3 b) and No.4;</li> <li>- Decree-Law No. 102/2010, 23/09.</li> </ul> <p>Unimadeiras has in place procedure for checking, through site visits and interviews, if air pollution aspects comply. Unimadeiras suppliers are either certified FSC, PEFC</p> <p>or both. Best practices are considered and checked.</p>
<b>Risk Rating justification</b>	Air legal framework includes air law and national air quality plan, the Portuguese Environment Agency being the national authority. Other police authorities like SEPNA (National Republican Guard) and Nature Guards and Rangers, also have competencies on air pollution inspection actions. Major negative impacts from forests are due to wildfires which are not considered management activities. Burning forest residues at the forest site is prevented with forest feedstock sourcing for biomass and legal framework in force during high fire hazard periods. Forest equipment is required to comply with EU directives, including air pollution (NP 1948, 1994; NP 2761, 1988; NP EN 13525:2005+A2:2009).
<b>Risk Rating</b>	Low Risk

<b>Portugal Mainland</b>	<b>Indicator</b>
<b>2.2.7</b>	Pesticides shall only be used as part of an Integrated Pest Management (IPM) plan in compliance with national legislation, chemical safety data sheets and industry best practice. Banned pesticides shall not be used.
<b>Supply Base Verifiers</b>	APPLICABLE LEGISLATION:

	<p>The national legal framework for the use of agrochemicals is Law No. 26/2013 from April 11th, which applies to the Portuguese context of EU Directive No. 2009/128/CE, of 21/10.</p> <p>Unimadeiras has in place procedure for checking, through site visits and interviews, if pesticides are used and, if applicable, according to the respective management plan. Unimadeiras suppliers are either certified FSC, PEFC or both. Best practices are considered and checked.</p>
<b>Risk Rating justification</b>	<p>There is national legal framework for the use of agrochemicals, which includes:</p> <ul style="list-style-type: none"> <li>- Only distributing companies and sales outlets authorized by the Directorate-General for Food and Veterinary (DGAV) may carry out the activity of distribution or sale of phytopharmaceuticals;</li> <li>- Establishment of the qualification requirements for the responsible technician for the trade of the chemical products;</li> <li>- Definition of the minimum training required for the user and applicator of the phytopharmaceuticals;</li> <li>- Definition of the good practices to reduce the negative impacts of the use of phytopharmaceuticals. The implementation of this law had a very positive impact on the use of agrochemicals and included the necessity of accreditation and records (quantities, disposals, etc.) for all the operators involved.</li> </ul> <p>The use of chemicals on Portuguese forests is not common and it is very restricted to few cases because, among other reasons, there are few homologated products applicable to the most important phytosanitary forest plagues and diseases.</p>
<b>Risk Rating</b>	Low Risk

Portugal Mainland	Indicator
<b>2.2.8</b>	Waste shall be disposed of in an environmentally appropriate manner.
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <p>The legal framework for waste disposal is based on a law which applies to the Portuguese legal framework of EU Directive No. 2008/98/CE.</p>

	<p>- Decree-Law No. 73/2011, 17/06.</p> <p>LEGISLATION ENFORCEMENT:</p> <p>The Portuguese Environment Agency is the national authority but other police authorities like SEPNA (National Republican Guard) and Nature Guards and Rangers</p> <p>have surveillance competencies in this matter, as well as municipal authorities that can implement municipal regulations in conformity with the relevant legislation.</p>
<b>Risk Rating justification</b>	<p>There is legal framework for waste disposal in Portugal. Waste disposal on forest lands exist in Portugal and it affects both private and public lands. But as it is illegal in the country there are efforts made by private owners and authorities to collect the waste and send it to a final legal destination. Some of the measures used by owners include sign installation against waste disposal and filling complaints to authorities in case of illegal waste disposal.</p>
<b>Risk Rating</b>	Low Risk

Portugal Mainland	Indicator
<b>2.2.9</b>	Harvesting levels shall be justified as to how they can be sustained with reference to inventory and growth data for the Supply Base.
<b>Supply Base Verifiers</b>	<p>The last national forest inventories address the indicator:</p> <p>5th National Forest Inventory - IFN5 (2010);</p> <p>6th National Forest Inventory - IFN6 (2015).</p> <p>Unimadeiras suppliers are either certified FSC, PEFC or both. Best practices are considered and checked.</p>
<b>Risk Rating justification</b>	<p>Statistical information from the National Forest Inventory is fully available in IFN6 (2015):</p> <ul style="list-style-type: none"> <li>- From 2010 to 2015 forest area increased by 1,9%.</li> <li>- In 2015 (IFN6), forest growth was 172 million cubic meters, similar value to 2005 (IFN5)</li> </ul>

	<p>- The maintenance of wood volumes between the two last inventories shows that forest production can be considered, globally, as sustainable, since the wood volumes lost through harvesting, wild fires, plagues and diseases were in balance with the overall forest growth.</p> <p>Hence, all the above information indicates that the actual harvesting volume does not exceed sustainable values or compromises long-term economic viability of stands.</p>
<b>Risk Rating</b>	Low Risk

Portugal Mainland	Indicator
<b>2.2.10</b>	Harvested areas shall be regenerated
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Forest Policy Law: Law No. 33/96, 17/08; last updated by D.L. No. 254/2009, 24/09</li> <li>- Estratégia Nacional para as Florestas (ENF): Resolução do Conselho de Ministros No. 114/2006, 15/09; last updated by Resolução do Conselho de Ministros No. 6-B/2015, 04/02;</li> <li>- Decree-law 84/2022, 9/12.</li> </ul> <p>Unimadeiras suppliers are either certified FSC, PEFC or both. Best practices are considered. Unimadeiras has procedures in place to check if harvested areas are regenerated.</p>
<b>Risk Rating justification</b>	<p>The Portuguese forestry sector is subject to the instruments of political administration provided in the 1976 Constitution, the established in the Forest Policy Bases Law (1996) and other specific legislation. The global evolution of the sector is defined by government programs and the National Strategy for Forests (approved in 2006 and updated in 2015), which is transposed territorially by 21 PROF (regional plans of forestry planning), covering the mainland territory. Public and community forests, private areas above a certain area and ZIF (zones of forestry intervention) must have a PGF (forestry management plan). In the Continent approved PGFs cover 2M ha and cover 35% of forest stands. Stands of stone pine, cork oak and eucalyptus exhibit a coverage rate by PGF higher than the national average. [ICNF, 2021]. The promotion of associations between owners and managers of wild resources (including hunting and fishing) has been also one</p>

	<p>of the policy objectives for some decades. Currently, 150 forestry producer organizations (OPF) are registered in ICNF, which include owners' associations, forestry cooperatives, or with a forestry section, and their federations, 77% of which are at municipal level, in addition to 6 recognized forestry management entities (EGF). Since 2005, there has been a major expansion of joint management of the territory through ZIFs, which currently covers 1,7M ha and brings together more than 23 000 voluntary participating owners and 84 management entities (including associations, cooperatives and companies). [ICNF, 2021]. Although Portugal's interest in its forest, the legal framework doesn't determine harvested areas regeneration as mandatory. Presently, there isn't a general legal obligation for regeneration of the harvested areas in Portugal, apart from the sustainability criteria transposed from REDII. Nevertheless, public and private entities have mandatory forestry management plans, which include an evaluation document for timber and non-timber products and, if covered by classified areas, a program for biodiversity management. The execution of the Forest Management Plans is responsibility of ICNF for public areas and may be delegated for mixed properties. For private areas the responsibility is of private individuals or forestry producers. Those plans are required to respect the Regional Forest Management Plans (PROFs in the mainland, which define specific rules of intervention, use and management of forest areas.</p> <p>These regional plans were designed to ensure a regular and continuous supply of goods and services from forests for present generations without affecting the ability of future generations to ensure the supply of the same goods and services, and safeguarding the objectives set out in the respective Forest Strategies. We may then infer that the regeneration of harvested areas is considered.</p>
<b>Risk Rating</b>	Low Risk

<p><b>Risk Rating justification</b></p>	<p><u>Pests and diseases</u></p> <p>The Operational Program of Forest Health defines a complete action framework comprising implementation assessment reports (diagnosis, identification, control, monitoring, sampling, etc.), informative leaflets (“FitoNotícias”), best practices handbook aimed at several steps of forest-based operations and a wide diversity of documents and actions aiming to inform and train forest owners and operators on legislation, best practices,</p>

precautionary measures among others. Programs aimed at monitoring forest health and at monitoring and controlling quarantine and

non-quarantine organisms, pests and diseases are in place, annual reports addressing the implementation of the action plans set out to tackle threats from pest and diseases are made available on ICNF webpage: <https://www.icnf.pt/florestas/fitossanidade>

The most important biotic threat for tree species relevant for timber feedstock is the Nemátodo da Madeira do Pinheiro (NMP) [Pine Tree Nematode]. Other relevant are:

- Cancro-resinoso-do-pinheiro “Fusarium circinatum” [Pine Resin Cancer];
- Gorgulho-do-eucalipto [Gonipterus platensis] affecting eucalyptus.

Comprehensive action plans aimed to control and eradicate the Pine Tree Nematode in Portugal are in place and pursue the following objectives:

- Identify affected forest areas (Intervention Zones [Zonas de Intervenção]);
- Avoid the dissemination of the disease to the Buffer Zone [Zona Tampão], a strip of 20 km along the border with Spain;
- Avoid the spreading of the disease from affected to non-affected areas.

Execution reports of the action plan for the control of NMP, between 2008 and 2017, show that the disease is geographically confined to the Intervention Zones (ZI) and the number of vector insects detected with NMP is stable over the years. Simultaneously, no positive samples were identified at the buffer zone (ZT).

Coniferous wood timber must be accompanied by a specific harvesting manifest [NMP manifest] which is issued through an online ICNF platform, <https://fogos.icnf.pt/manifesto/manifestoadd.asp>, where the involved operators are required to be registered. The NMP manifest contains all the relevant information about the harvested timber, location of the harvesting operation, registered operator which performed the harvest, land owner, destination, among other data.

Data from surveillance operations, comprising the inspection of more than 22 000 wood transport vehicles, show a residual number of contraventions raised by the lack of the NMP manifest – 30 in 2022. These data are presented in the 2022 Activity Report of the Republican National Guard [GNR] Reports from the execution of the action plan to monitor and control the spreading of *Fusarium circinatum* are available comprising the period between 2012 and 2018. Data show a stable trend of infected production sites and number of plants destroyed. Only 3 forest stands were declared as infected over the assessment period. The “Sistema de Gestão de Informação de Fitossanidade Florestal” (FITO) is an online platform where all inspectors responsible for the

application of the several action plans related to forest health can add relevant information and findings from their work.

Considering that effective management activities are put in place regarding the control of forest pests and diseases comprising annual reports and surveillance of forest operators on the compliance with legal requirements, the risk is considered low for management of pests and diseases.

#### Rural Wild Fires

In recent years, mainland Portugal was affected by the most intense and destructive fires recorded, such as the 2003 fire season where 300 thousand ha of forest were burnt, 18 people died, approximately 85 were displaced, and hundreds had to be evacuated from their homes; the 2017 fire season that burned more than 500 thousand ha, and resulted in more than 100 human lives lost; the 2018 southern Portugal wildfire, which destroyed dozens of homes and killed thousands of animals. Consequences of these fires were wide social, environmental, and economic losses, with the 2017 fire season having a consequent economic cost greater than one thousand million of Euros, the 2018 fire season leaving more than 100 homeless, and the 2022 fire season having a strong impact on biodiversity, natural heritage, tourism, and local producers of Serra da Estrela. Indeed, these recent occurrences point to a “new normal” where frequent extreme 14 fire risk conditions and

consequent events take part of everyday life in the warmer months, typically between June and September. This is more worrisome when taking projections of climate change until the end of the 21st century. A recent study showed that summer values of fire risk tend to substantially increase in the future, with a likely stretching of the danger period. The north-western region of Iberia, including the north of Portugal and the north-western-to-central Spain were the regions where

larger increases in fire risk in the future were found. These findings are especially noteworthy since these are the regions with more fire-prone vegetation. In Portugal, rural wild fires are addressed in several planning and strategic documents as the

National Strategy for Forest, 2015, and the National Plan for the Reduction of Fire Occurrences, 2016. Relevant information about rural wild fires can be found in the dedicated page of the ICNF website, where the following is available:

- Mapping of combustible management lanes, high risk areas, areas affected by wildfires, etc.;
- Good practices, reports and technical orientations;
- Studies and Planning;

- Statistics; and,
- Legal framework.

Establishes measures and actions to take place within the framework of the Forest Safeguard System Against Wildfires, such as:

- A 10 meters buffer lane must be kept between trees or railways, roads, electric lines in high or very high voltage, transport lines of gas or oil products
  - 7 meters buffer lane between trees and for medium voltage electric distribution lines, from SIRESP's infrastructures.
  - 3 meters buffer lane between trees and for low voltage electric distribution lines.
  - 100 meters buffer lane around camping and caravan parks, hotel establishments, in business location areas, in industrial establishments, in establishments covered by Decree-Law no.150/2015, fuel supply, logistics platforms, production and storage facilities for electrical energy or gas and in sanitary landfills, In the surroundings of built-up areas, when bordering forest territories (may be reduced to 10 m distance based up on risk assessment);
  - 50 meters buffer lane between trees and other habitational or economical activities' edifications non mentioned on obliged to the 100 m buffer lane.
- Instruments to support the implementation of actions to recover the effects of large forest fires are applied every year in order to manage the risks created by the occurrence of forest fires: <https://www.icnf.pt/florestas/gfr>

There is a Program of Forest Rangers in place to promote several activities related to the prevention of fires, operators and public awareness among others. To assess the effectiveness of the activities performed during the year, several activity reports are available with the listing of operations, statistics analysis and other relevant information. The Protection of forest against forest fires is implemented and applied by every municipality and the Municipal plans approved and in force are available for consultation: Consulta PMDFCI (icnf.pt)

For wild fires, since 2017, the most tragic year, the awareness of the population has raised and some mechanisms and obligations were implemented that help to prevent and to facilitate the wild fire intervention. Around buildings there must be a clean distance of 50 meters, forests must be cleaned annually to difficult the fire progression, first intervention teams were created in small villages to enable first intervention until firefighters 'teams arrive. National media campaigns take place during all the fire season discouraging dangerous behaviours. Outside the fire season, when the fire risk improves is possible to find warnings in radio or television regarding the fire risk. There were improvements in the firefighter's equipment and the fire season was enlarged (this fire season determines the firefighting equipment availability and teams' readiness), there are geographical information systems

	dedicated to fire's events. The less taken care forests are not the ones that are being commercially explored. Unfortunately, due to the expected climate evolution in Portugal in the Mediterranean area severe wildfires are expected, although biomass production provides a positive effect in defending the forest.
<b>Risk Rating</b>	Specified Risk

Portugal Mainland	Indicator
<b>2.2.12</b>	Genetically modified trees shall not be used.
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Decree-Law No. 55/2015, 17/04;</li> <li>- Decree-Law No. 72/2003, 10/04;</li> <li>- APA-Agência Portuguesa de Ambiente;</li> <li>- DGAV- Direção Geral de Alimentação e Veterinária;</li> <li>- EU GMOs: Genetically Modified Organisms - European Commission (europa.eu)</li> </ul>
<b>Risk Rating justification</b>	In Portugal there is not a specific legal framework for Genetic Modified (GMO) trees, but for all vascular plants. This legislation does not prohibit commercial use of GMO plants which are legal in the country since 1999. However, only corn (maize) is cultivated (around 6% of the total production). No recent trial of GM trees in the country has been found. A low-risk conclusion is justified because there was no interest shown for GMO use in the forestry sector.
<b>Risk Rating</b>	Low Risk

Portugal Mainland	Indicator
<b>3.2.2</b>	Primary feedstock shall not be sourced from forest areas where site productivity is low and, according to local definitions or norms, the areas are classified as low-productive or difficult to regenerate.
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- National Forest Strategy: RCM No. 6-B/2015.</li> </ul> <p>Compliance with this indicator is verified at national level.</p>

<b>Risk Rating justification</b>	<p>According with the 3rd Editions of the World Atlas of Desertification (Publication Office of the European Union, Luxembourg, 2018), Portugal presents a convenient net primary production. Net primary production (NPP) is the amount of biomass or carbon produced by primary producers per unit area and time, obtained by subtracting plant respiratory costs from gross primary productivity (GPP) or total photosynthesis. Some of the key factors that lead to long-term reductions in NPP are associated with various forms of land degradation. This includes soil erosion (wind, water), nutrient depletion, salinization, soil compaction and crusting, topsoil losses and nutrient depletion, changes of vegetation composition and structure, and water depletion. Long-term change in NPP is potentially a useful indicator of land degradation, but interpreting short-term changes in NPP as degradation can be misleading because it can be a reflection of climatic fluctuations.</p> <p>Statistical information on the National Forest Inventory is fully available and results show that the maintenance of the wood volumes between the last national forest inventories (IFN5 and IFN6) indicate the sustainability of the forest production.</p>
<b>Risk Rating</b>	Low Risk

<b>Portugal Mainland</b>	<b>Indicator</b>
<b>3.2.3</b>	feedstock shall not be sourced from forest areas in the Supply Base which, according to local definitions or norms, are classified as having combined attributes of high carbon stocks and high conservation value (HCV).
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Regulation (EU) 2018/841;</li> <li>- Portugal's National Forestry Accounting Plan;</li> <li>- National Energy and Climate Plan 2030: Resolução do Conselho de Ministros n.º 53/2020, 10 July: <a href="https://apambiente.pt/clima/plano-nacional-de-energia-e-clima-pnec">https://apambiente.pt/clima/plano-nacional-de-energia-e-clima-pnec</a></li> <li>- National Long-Term Strategy RNC2050: Resolução de Conselho de Ministros n.º 107/2019, 1 July;</li> <li>- Decree-Law 84/2022, 9th December, sets out the targets for the consumption of energy from renewable sources, supplementing the transposition into national legal order of the European Directive 2001/2018.</li> </ul>
<b>Risk Rating justification</b>	High conservation value or High conservation area(s) detain biological, ecological, social or cultural value of outstanding significance or critical importance. An HCV area is land required to maintain the values. ICNF Geo

	<p>catalogue -Organic carbon in soil, shows the total organic carbon retention capacity of Portuguese soils based on forestry and agricultural land use (between 1999-2005). Using the Forest Reference Level as an accounting method to evaluate the contribution of managed forests, as required by the LULUCF regulation, such only allow for accounting the deviations between real emissions in the commitment period from the level foreseen in the Forest Reference Level. Therefore, the mere presence of Carbon stocks will not be accounted for in Portugal. Decree-Law No. 84/2023, Article 14th, point 4, states that forest biomass legally harvested complies with the sustainability criteria to reduce GHG from biomass, which are the same as the forest biomass related points of the EU Directive 2001/2018, Article 29th. Although HCV mapping for Portugal is available and well defined, this indicator is considered to not be currently applicable in Portugal.</p>
<b>Risk Rating</b>	Low Risk

Portugal Mainland	Indicator
<b>3.1.1</b>	<p>LULUCF emissions shall be accounted for through one of the following routes: Route A Feedstock may be sourced from a country of origin which is party to the Paris Agreement, and which has submitted a Nationally Determined Contribution to the United Nations Framework Convention on Climate Change (UNFCCC) covering carbon emissions and removals from agriculture, forestry and land use which ensure the changes in carbon stock associated with biomass harvest are counted towards the country's commitment to reduce or limit greenhouse gas emissions, or Route B Feedstock may be sourced from a country of origin which is party to the Paris Agreement and has national or sub-national laws in place (developed in accordance with Article 5 of the Paris Agreement and applicable in the area of harvest), to conserve and enhance carbon stocks and sinks, and provided there is evidence that reported LULUCF-sector emissions do not exceed removals, or Route C Feedstock may be sourced from a Supply Base where an assessment demonstrates that both the carbon stock is stable, and the forests' capacity to act as a carbon sink is stable or increasing over the long term.</p>
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Regulation (EU) 2018/841;</li> <li>- Portugal's National Forestry Accounting Plan;</li> <li>- National Energy and Climate Plan 2030 (RCM No. 53/2020, 10 July): <a href="https://apambiente.pt/clima/plano-nacional-de-energia-e-clima-pnec">https://apambiente.pt/clima/plano-nacional-de-energia-e-clima-pnec</a></li> <li>- National Long-Term Strategy RNC2050 ( RCM No. 107/2019, 1 July.</li> </ul> <p>Compliance with this indicator is verified at national level.</p>

<b>Risk Rating justification</b>	<p>Regulation (EU) 2018/841 sets out the commitments, the rules for the accounting of emissions and removals and the rules for checking the compliance for the land use,</p> <p>land use change and forestry (LULUCF) sector that contribute to achieving the objectives of the Paris Agreement and meeting the greenhouse gas emission reduction target of the Union for 2021 to 2030. Its article 8 determines that accounting for the emissions and removals resulting from managed forest land is calculated as the emissions and removals in the periods from 2021 to 2025 and from 2026 to 2030 minus the value obtained by multiplying by five of the forest reference level (FRL). The 'Forest Reference Level' is an estimate, expressed in tonnes of CO2 equivalent per year, of the average annual net emissions. Annex IV of Section A of the Regulation sets out the criteria to the estimations. This Portuguese National Forestry Accounting Plan presents the proposal for a "Forest Reference Level" to be used for accounting of managed forests in Portugal and in the period 2021-2025. Portugal is party to the Paris Agreement, and has submitted a (NDC) Nationally Determined</p> <p>Contribution to the United Nations Framework Convention on Climate Change (UNFCCC).</p>
<b>Risk Rating</b>	Low Risk

<b>Portugal Mainland</b>	<b>Indicator</b>
<b>3.2.1</b>	<p>All feedstock sourcing shall be consistent with either of these two options: Option A. Feedstock may be sourced from Supply Bases where an assessment of the Supply Base shows that the forest carbon stocks are stable or increasing, or Option B. Feedstock may be sourced, if the assessment shows that the forest carbon stocks are declining in the Supply Base, provided that the decline is due to natural processes (fire, pests etc.), and sourcing of feedstock has the aim to recover feedstock that would otherwise be lost or to assist regeneration.</p>
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Regulation (EU) 2018/841;</li> <li>- Portugal's National Forestry Accounting Plan;</li> <li>- National Energy and Climate Plan 2030 (RCM No. 53/2020, 10 July): <a href="https://apambiente.pt/clima/plano-nacional-de-energia-e-clima-pnec">https://apambiente.pt/clima/plano-nacional-de-energia-e-clima-pnec</a></li> <li>- National Long-Term Strategy RNC2050 ( RCM No. 107/2019, 1 July.</li> </ul>

	Unimadeiras investigates through desk assessment: up to date reports and scientific articles regarding national carbons stocks, Forest Reference Level historic data, data on natural causes (when/if applicable) for the stock decrease, as well as for forestry legislation updates.
<b>Risk Rating justification</b>	Portugal adopted to comply with the Kyoto Protocol (2008-2012), forestry activities as a way of compensating for greenhouse gas emissions originating in other sectors. The Portuguese forest is a reservoir of 334 Mt CO <sub>2</sub> eq [of carbon] and it sequesters 8.7 Mt CO <sub>2</sub> eq per year, around twice the emissions of our industry. [ICNF, 2021]. Using the Forest Reference Level as an accounting method to evaluate the contribution of managed forests, as required by the LULUCF regulation, such only allow for accounting the deviations between real emissions in the commitment period from the level foreseen in the Forest Reference Level. Therefore, the mere presence of carbon stocks will not be accounted for in Portugal. This way and provided that such deviation is not negative, we may infer that the forest carbon stocks are stable or increasing. If having a negative deviation, it will be verifiable if the carbon stock loss is due to natural causes or not, case in which the effect of the feedstock sourcing in the carbon stocks and forest regeneration may be assessed. When option A applies, the compliance will be demonstrated at country level. If option B applies, the natural causes for carbon decrease will be demonstrated at country level, and the harvesting effect will be demonstrated, either with legal compliance or forest certification.
<b>Risk Rating</b>	Low Risk

Portugal Mainland	Indicator
<b>3.3.1</b>	Feedstock sourcing shall not compete with wood sourcing for long-lived wood products.
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- New EU Forest Strategy 2030;</li> <li>- Decree-Law No. 73/2022, 24/10.</li> </ul> <p>Unimadeiras defines with its suppliers the type and characteristics of the feedstock (respecting the cascading principle). Visual and document control of the feedstock is made.</p>
<b>Risk Rating justification</b>	The experience shows that market itself regulates the proper use of wood. There is no commercial logic on using for processing materials which may be traded with better profit. Wood is a commodity and the EU laws walk the path to value its resources. At the same time, wood presents an opportunity as

	<p>carbon sink (at the forest and outside of it). Each tree may be entirely used and, as a valuable resource, its use must be optimized considering that long lived products have priority. Despite the above, the wood industry has cycles of lower production with consequent lower</p> <p>demand for supply, and within the forest-based industry there are various subsectors that develop independently from each other. In those cycles the forest keeps growing, the forest industry still operates, and the fire menace exists. These discrepancies don't vary only in time but also in space, even in a small country such as Portugal.</p> <p>There is a growing recognition of the need to align bioenergy policies with the cascading principle of biomass use, aiming to ensure fair access to the biomass feedstock market. In line with the cascading principle, woody biomass should be used according to its highest economic and environmental added value in the following order of priorities:</p> <ul style="list-style-type: none"> <li>- wood-based products;</li> <li>- extending their life service;</li> <li>- re-use;</li> <li>- recycling;</li> <li>- bio-energy; and,</li> <li>- disposal.</li> </ul> <p>Where no other use for woody biomass is economically viable or environmentally appropriate, energy recovery helps to reduce energy generation from non-renewable sources. Member States should be allowed to derogate from the cascading principle in duly justified circumstances, for example where required for security of energy supply purposes, such as in the case of particularly severe cold</p> <p>conditions, and where there are no industries or processing facilities that could make a higher added value use of certain feedstocks within a geographical perimeter. In such cases, transport beyond that perimeter for the purpose of such a use might not be justified from an economic or environmental point of view. As said, there are conditions that may justify a deviation on the cascade use, but this should be properly justified.</p> <p>Considering the above and the natural market volatility, this indicator risk is considered specified. A closer assessment will provide more awareness of this indicator.</p>
<b>Risk Rating</b>	Specified Risk

ACT has strategic Plans for Agriculture and Forest activities and also has in place integrated inspections with Spanish authorities for agriculture and forestry activities. ACT acquired a drone to help agriculture and forestry inspections. Inspective activities of ACT and SEF result in penalties or suspensions when illegal situations are found.</p> <p>Unimadeiras has a control system and adequate procedures on checking legality of its suppliers. Additionally, Unimadeiras has its own Code of Conduct and is, as well as its suppliers, FSC certified. FSC CoC Standard demands compliance with 4 core labour requirements, where no discrimination in work and in occupation is included.</p>
<p><b>Risk Rating justification</b></p>	<p>Protection against discrimination in labour is included in the Portuguese Constitution (Article 55), and in Labour Code. Portugal ratified in 1959 the ILO convention related with discrimination on work and career, C111 (1958). Also, the convention on equal remuneration C100 was ratified in the year 1966.</p> <p>Portugal is well positioned in the majority of international reports:</p> <ul style="list-style-type: none"> <li>- Corruption Perception Index scores 61 in 2023, meaning low perceived level of corruption;</li> <li>- Worldwide Governance Indicators (WGI) from 73.3 to 84.13 (1-100points). The WGI reports six aggregated governance indicators for over 200 countries and territories covering: - Voice and Accountability; - Political Stability and Absence of Violence / Terrorism; - Government Effectiveness; - Regulatory Quality; - Rule of Law; - Control of Corruption.</li> <li>- Free country on press, net, political rights and civil liberties.</li> </ul> <p>On the other hand, Portugal (including human rights, illegal logging, forest and timber) is not listed in alarming reports or indexes such as:</p> <ul style="list-style-type: none"> <li>- Committee to Protect Journalists Impunity Index;</li> </ul>

	<ul style="list-style-type: none"> <li>- Human Rights Watch;</li> <li>- Global Witness;</li> <li>- Chatham House;</li> <li>- Amnesty International.</li> </ul> <p>Some observations were found about discrimination against women in jobs and remuneration and gender pay gap (see below Direct Request (CEACR) - adopted in 2014, published 104th ILC session (2015) Equal Remuneration Convention, 1951 (No. 100) – Portugal). Also, discrimination episodes were found against Roma and LGB (see below Amnesty International 2014/2015 report The State of the World’s Human Rights) but not related to work activities. Based on the available information, no evidence was found that confirms the existence of risks of discrimination in respect to employment and occupation in forestry in Portugal.</p>
<b>Risk Rating</b>	Low Risk

<b>Portugal Mainland</b>	<b>Indicator</b>
<b>4.1.5</b>	Wages paid to workers shall meet or exceed the legal minimum wage or where there is no statutory minimum wage industry norms shall be met or exceeded
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Portuguese Republic Constitution;</li> <li>- Labour Code - Law n. º 7/2009, 12/02;</li> <li>- Decree-Law No. 77/81, 19/06: <a href="http://www.ilo.org/public/portugue/region/eurpro/lisbon/pdf/conv_131.pdf">http://www.ilo.org/public/portugue/region/eurpro/lisbon/pdf/conv_131.pdf</a></li> <li>- Decree-Law No. 88/81 of 14/07: <a href="http://www.ilo.org/public/portugue/region/eurpro/lis-bon/pdf/conv_95.pdf">http://www.ilo.org/public/portugue/region/eurpro/lis-bon/pdf/conv_95.pdf</a></li> </ul> <p>LEGISLATION ENFORCEMENT:</p> <p>ACT -Autoridade para as condições do Trabalho /Working Conditions Authority. Other authorities are related to the issue, like Immigration and Borders Services (SEF) social security services or even tax services. All of them can make inspections on different issues related to work, joined by police authorities like GNR-National Republican Guard and PSP-Public Security Police.</p>

	<p>Unimadeiras has a control system and adequate procedures on checking legality of its suppliers. Additionally, Unimadeiras has its own Code of Conduct and is, as well as its suppliers, FSC certified. FSC CoC Standard demands compliance with 4 core labour requirements, where forced no use of labour and no discrimination are included.</p>
<b>Risk Rating justification</b>	<p>Minimum wage is included in the Portuguese constitution (Article 59), and Labour Code. Portugal ratified the ILO convention on minimum wage C131 (1970) in the year 1981. Also, the convention on salary protection C95 was ratified in the year 1981. Payment and employment conditions are included and are updated in the labour code. The Authority directly involved in employment conditions is Work Conditions Authority (ACT) but for many reasons other authorities are related to the issue, like Immigration and Borders Services (SEF) social security services or even tax services. ACT has strategic Plans for Agriculture and Forest activities and also does integrates inspections with Spanish authorities for agriculture and forestry activities. A recent notice states that ACT acquired a drone to help agriculture and forestry inspections. Inspective activities of ACT and SEF result in penalties or suspensions when illegal situations are found.</p> <p>According to the available information on employment conditions, there is a legal framework in the country, and there are legal authorities to enforce legislation. It is therefore considered that Portugal has a low risk that pay and employment conditions are not fair and do not meet minimum requirements.</p>
<b>Risk Rating</b>	Low Risk

<b>4.1.6</b>	Working hours shall comply with legal requirements.
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Labour Code: Law No. 7/2009, de 12 February; last updated by Retification No. 13/2023, 29 May.</li> <li>- Health and Safety at Work: Law No. 102/2009, 10/09; last updated by Law No. 79/2019, 2 September.</li> </ul> <p>LEGISLATION ENFORCEMENT: ACT -Autoridade para as condições do Trabalho /Working Conditions Authority;</p>

	<p>Unimadeiras has a control system and adequate procedures on checking legality of its suppliers. Additionally, Unimadeiras has its own Code of Conduct and is, as well as its suppliers, FSC certified. FSC CoC Standard demands compliance with 4 core labour requirements, where forced no use of labour and no discrimination are included.</p>
<b>Risk Rating justification</b>	<p>The Portuguese labour code determines working hours, extraordinary hours, their legal regime and retribution and the law application is verified by ACT - Autoridade para as Condições do Trabalho /Working Conditions Authority. The Portuguese law obliges to register each worker working hours, regular and extraordinary hours.</p> <p>By law, working schedule is required to be posted at the company's working place. According to the latest publicly available ACT inspection report (2019), and based on the statistics of registered infractions and notifications related to Working Hours, these represent 9% of total infractions and 1% of total notifications. If we only consider infractions relating to the effective fulfilment of working hours, these correspond to 0,2% of the total.</p>
<b>Risk Rating</b>	Low Risk

<b>Portugal Mainland</b>	<b>Indicator</b>
<b>4.1.7</b>	Workers shall have access to health care provisions, sickness benefits, retirement benefits, invalidity benefits, death benefits, and workers' compensation
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Health and Safety at Work: Law No. 102/2009, 10/09; last updated by Law No. 79/2019, 2 September.</li> <li>- Labour Code: Law No. 7/2009, de 12 February; last updated by Retification No. 13/2023, 29 May.</li> </ul> <p>LEGISLATION ENFORCEMENT:</p> <ul style="list-style-type: none"> <li>– ACT -Autoridade para as condições do Trabalho /Working Conditions Authority;</li> <li>- DGS -Direcção Geral de Saúde /General Directorate of Health;</li> <li>– ANPC -Autoridade Nacional de Protecção Civil /National Civil Protection Authority.</li> </ul>

	<p>Unimadeiras has a control system and adequate procedures on the health and safety of forest workers. Unimadeiras demands the same from its feedstock suppliers and checks the health safety of harvesting personnel during its monitoring</p> <p>(administrative and field) inspections.</p>
<b>Risk Rating justification</b>	<p>In Portugal, these benefits are determined by law to all activity sectors, including forestry, either being the labour code, the legal regime of promotion of safety and</p> <p>health at work or the legal framework for social protection in the event of illness, within the framework of the welfare subsystem of social security.</p>
<b>Risk Rating</b>	Low Risk

Portugal Mainland	Indicator
<b>4.1.8</b>	Training shall be provided for all workers to allow them to implement the conditions set out in all elements of the SBP Standards relevant to their responsibilities.
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION: Law No. 7/2009, 12/02 - Labour Code.</p> <p>LEGISLATION ENFORCEMENT: ACT -Autoridade para as condições do Trabalho /Working Conditions Authority.</p> <p>BEST PRACTICES IMPLEMENTATION BY OPERATORS:</p> <p>Unimadeiras trains and/or informs its personnel and its suppliers on all relevant aspects:</p> <ul style="list-style-type: none"> <li>- Training/information records obligatory according to legislation and necessary records of qualification are collected during supplier following process and checked during supplier visits;</li> <li>- Training/information on best forest management practices.</li> <li>- The level of knowledge of personnel is inspected during site visits.</li> </ul>
<b>Risk Rating justification</b>	<p>In Portugal the labour code and the health and safety at work regime imposes the training for workers. Such training has to be documented. Each year the amount of training hours is reported (Relatório Único -RU) and within a period of time all individual workers must have had, at least, the legal amount of training hours. Yet, such does not determine the content of the training and so this indicator must be assessed. All companies must provide an annual report to the (Ministry for Solidarity and Social Security), which is registered in Annex D, with:</p>

	<ul style="list-style-type: none"> <li>- Quantity and severity of accidents at work and occupational diseases;</li> <li>- Training hours related to OSH (occupational safety and health);</li> <li>- Organization of OSH services;</li> <li>- Risk identification, assessment, and control;</li> <li>- Periodic medical aptitude tests.</li> </ul> <p>Portugal is a country with an old tradition on forests activities. University education is provided on the technical side with several colleges in the country. There are specific courses for field machinery operators. The National Strategy for Forests states that the focus on the professionalization and training of the different actors in the forestry sector is of key importance for increasing the competitiveness and, thereby, the development of the sector.</p> <p>ACT develops initiatives and projects aimed at the forestry sector. These consist of awareness and training in the most significant risks in forestry. FSC Portugal and forestry stakeholders were involved in some of these initiatives. ACT (Work Conditions Authority) has an available online channel for workers to complaint on working conditions, including training legal failure by companies, and promptly acts to investigate and punish the companies, if any fail to labour legislation is detected.</p>
<b>Risk Rating</b>	Low Risk

<b>4.2.1</b>	Negative social and community impacts shall be identified and avoided.
<b>Supply Base Verifiers</b>	APPLICABLE LEGISLATION:

	<ul style="list-style-type: none"> <li>- Law No. 2069, April 24th 1954;</li> <li>- Decree-law 47344/66, November 25th.</li> <li>- Portuguese Constitution: Decree of 10/04/1976; last updated to Law No. 1/2005, 12 August;</li> <li>- Civil Code: <a href="http://www.pgdlisboa.pt/leis/lei_mostra_articulado.php?nid=775&amp;tabela=leis">http://www.pgdlisboa.pt/leis/lei_mostra_articulado.php?nid=775&amp;tabela=leis</a></li> <li>- Rights of use of common forest areas: Law No. 75/2027, 17 August.</li> </ul> <p><b>LEGISLATION ENFORCEMENT:</b></p> <p>GNR (National Republican Guard) and ICNF (Institute for Nature and Forest Conservation) are the main enforcement authorities performing inspections onsite. All suppliers must comply with the laws in force, which are supervised by the Tax Authority.</p> <p><b>BEST PRACTICES IMPLEMENTATION BY OPERATORS:</b></p> <p>Although there are no indigenous people in Portugal, Unimadeiras considers important to evaluate the interests of the (local) population and social-economic functions of the forests and woodlands. Under its control system for suppliers and forest operation Unimadeiras has included the actions:</p> <ul style="list-style-type: none"> <li>- Customary rights, when applicable, are identified and documented;</li> <li>- Interviews with local communities or other relevant parties</li> <li>- Appropriate procedures in place to resolve any conflicts.</li> </ul>
<p><b>Risk Rating justification</b></p>	<p>In the Portuguese context, with almost all forest being privately owned, the possible negative impacts at social or community level will be related to the injury of customary rights. Customary usage rights are identified and documented. Interviews with local communities and other stakeholders indicate the absence of negative impacts from the forestry activity. Customary usage rights are identified and documented and interviews with local communities and other stakeholders, indicate that their rights are being respected. Customary Rights are described by the Portuguese Standard for Forest Management (NP4406:2014) as “rights which result from a long series of common or customary actions, constantly repeated, which have, by such repetition and by uninterrupted acquiescence, acquired the force of a law within a geographical or sociological unit”. Nevertheless, for a common action to be admitted as a rule and, for this reason, be considered a</p> <p>Customary Right, shall be supported by generalized and prolonged use (tradition), assuming the presumption that the general consensus approved such action. In this context, attention will be due to elements of local intangible cultural heritage (practices, traditions, etc.) related to the forest,</p>

	<p>which require respect and preservation. Therefore, the following requirements must be observed to a common action be considered within Customary Right:</p> <ul style="list-style-type: none"> <li>- It consists of repeated facts, evenly performed for a long period of time;</li> <li>- Generalized and public practice; and</li> <li>- Consist of licit facts and not contradictory to the law or public order.</li> </ul> <p>Laws must meet what is customary as well as common practices of what is socially and morally right. The customary right is described in article 348 of the Portuguese civil code. The interpretation of laws is described in article 9 of the Portuguese civil code. In the case of community areas, specific legislation regulates rights the use of common forest areas (“Lei dos Baldios”).</p> <p>There are no indigenous people or minorities that need special protection in the country, nor local communities who depend on forest services for their subsistence.</p>
<b>Risk Rating</b>	Low Risk

<b>Portugal Mainland</b>	<b>Indicator</b>
<b>4.2.2</b>	Feedstock sourcing shall positively contribute to the local economy, including employment.
<b>Supply Base Verifiers</b>	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Estratégia Nacional para as Florestas (Resolução do Conselho de Ministros n.º 6-B/2015, de 4 de fevereiro);</li> <li>- Plano Estratégico para as Florestas 2017-2030, ONU.</li> </ul>
<b>Risk Rating justification</b>	<p>Due to the Portuguese forest characteristics, mainly of small areas, most forestry services are contracted in locally, either for the cut as for the management activities. Feedstock is mainly supplied through domestic supply chains to BP's so economic impact related to feedstock chain from the forest, transportation, processing and BP is local. Also, it is mainly complementary with other wood industries as use on their processes low quality wood (which previously it was not exploited or it was burned) or wastes from industrial processes. In 2019 the forestry sector was also responsible for creating around 100 thousand (99,943) jobs, of which almost 70.8 thousand (70,786) corresponded to direct jobs in the primary sector and forest-based manufacturing industries. In 2021 the Pine sector represented 80% of the jobs in the forest industry (58 223 jobs) and 88% of companies in the forest industries (8 373 companies), which represented a rate of change in</p>

	<p>2020/2021 of +3% and +1%, respectively, according to the PINUS Centre, from INE (SCIE), 2023 to 2021 Data.</p> <p>SBP certificate holders tend to be also certified on other schemes and most of these</p> <p>also identify this indicator as relevant.</p>
<b>Risk Rating</b>	Low Risk

Supply Base Verifiers	<p>APPLICABLE LEGISLATION:</p> <ul style="list-style-type: none"> <li>- Cultural heritage: Law No. 107/2001, 8 September; Decree-Law No. 164/2014, 4 November; Decree-Law No. 140/2009, 15 June; Classified groves: Law No. 53/2012, 5 September;</li> <li>- Legislation for natural values cadastre: Decree-Law No. 242/2015 of 15/10:</li> </ul> <p><a href="https://dre.pt/application/conteudo/70693924">https://dre.pt/application/conteudo/70693924</a></p> <p>LEGISLATION ENFORCEMENT:</p> <ul style="list-style-type: none"> <li>- ICNF (Institute for Nature and Forest Conservation), APA (Portuguese Environment Agency), CCDR -Comissões de Coordenação e Desenvolvimento Regional (Regional Commissions for Coordination and Development), and GNR (National Republican Guard) through SEPNA (Nature and Environment Protection Services) are the main enforcement authorities performing inspections onsite. All suppliers must</li> </ul> <p>comply with the laws in force, which are supervised by the Tax Authority.</p> <p>BEST PRACTICES IMPLEMENTATION BY OPERATORS:</p> <p>Unimadeiras control system for feedstock, which also includes regular follow-up of suppliers and whenever necessary, at scheduled intervals, inspections to suppliers' operations, are duly implemented. All used material is traceable to its origin through the harvest manifests and/or transport guides. Unimadeiras suppliers are checked to be in compliance with the applicable legislation.</p>
Risk Rating justification	<p>Currently there is sufficient information concerning HCV location in forests. No major gaps in knowledge about HCV exist and data about biodiversity is updated regularly. Information on location and geographical distribution of nature conservation areas, rare, threatened and endangered species and habitats is considered sufficient. Cartographic data is made available by state forest authorities as well as private initiatives. ICNF: geoCATALOGO (icnf.pt)</p> <p>HCV 6, related to the cultural values are identified and well surveyed on Portuguese forests. The</p> <p>National Strategy for the Conservation of Nature and Biodiversity 2030 (ENCNB 2030), approved in</p> <p>2018, pursues a long-term vision based on three interdependent strategic axes:</p> <ul style="list-style-type: none"> <li>- Improve the conservation status of the Natural heritage,</li> </ul>

- Promote the recognition of value natural heritage, and
- Promote the appropriation of natural values and biodiversity by society.

HCV 6 – Cultural values: sites, resources, habitats, and landscapes of global or national cultural, archaeological, or historical significance, and/or of critical cultural, ecological, economic, or religious/sacred importance for the traditional cultures of local communities or indigenous peoples, identified through engagement with these local communities or Indigenous Peoples.

- World Heritage (UNESCO) Sites identified as World Heritage by UNESCO. In Portugal there are 15 sites identified, of which only two are designated as outstanding natural landscapes ('Paisagem Cultural de Sintra', around 900 ha, on the Portuguese mainland). The Iberian Risk Assessment also identified rocky landscapes such as the Vale de Foz Côa [Foz Côa Valley], the Douro slopes, places that, analysed more closely, are not part of the forestry sector –results of the meeting of the working group for category 3 (5th July 2016). In legal terms, the sites classified as World Heritage by UNESCO have the same protection as sites classified as a National Monument. Currently, there are other sites proposed for Portugal under assessment by UNESCO but those are not here included.
- Cultural heritage: in Portugal, there are specific governmental bodies to manage cultural heritage: the General-Directorate of Cultural Heritage for the Portuguese Mainland; the Regional Directorate of Culture of the North; the Regional Directorate of Culture of the Center; the Regional Directorate of Culture of the Alentejo; the Regional Directorate of Culture of the Algarve. Among others, these bodies are responsible for: managing the architectural and archaeological built heritage in urban and rural areas, including conservation works in monuments under our care; man-aging the national museums, World Heritage monuments and museum collections; studying, researching, and disseminating heritage-related information; conserving and restoring movable heritage assets as well as researching, disseminating results, and raising awareness about heritage protection issues. Any intervention in the territory affecting listed cultural heritage and its protection areas requires prior approval by the competent authorities mentioned above. Any intervention in the territory of a known archaeological site shall be subject to preventive archaeological work which allows it to be preserved by scientific record.
- Classified groves: the NRA WG has also looked at national legislation that identifies and protects outstanding grove (arboreta). The main source of information within this attribute is the application report of the Habitats Directive (2007-2012) as well as the description list of every habitat identified in Annex 1 of Habitats Directive in Sectorial Plan of the Natura2000 network. Other cartographic information of HCVs is included on open GIS, such as WebGIS Portugal:

<http://epic-webgis-portugal.isa.ulisboa.pt/>

	<p>Significant cultural features created intentionally by humans are identified and sufficient buffers are applied, since the criteria for identifying HCV 6 for Portugal are based on international or legal frameworks that already foresee the safeguards needed to protect/maintain the cultural values identified. In this indicator are considered all the relevant findings of the FSC Controlled Wood National Risk Assessment from September 2018 and the data from voluntary forest certification schemes, namely FSC and PEFC is also considered.</p>
<b>Risk Rating</b>	Low Risk

## Annex 2: RED II Supply Base Evaluation

Please add all countries where RED II Supply Base Evaluation is used	
Country	Portugal
Area	Mainland
<b>Sustainable harvesting criteria 29(6)</b>	
<b>(i) The legality of harvesting operations</b>	
Type of Risk Assessment used	<input type="checkbox"/> Level A – proof at national or sub-national level <input checked="" type="checkbox"/> Level B – management system at forest sourcing area level
Level A risk assessment description	N/A
Level B management system at the level of the forest sourcing area	<p>Land ownership and possession rights are covered by Portuguese legislation, and authorities have implemented instruments to register and control these rights (Decree-Law No. 80/2015 Legal Regime of Territorial Management Instruments; Law No. 31/2014 General Framework Law for land-use planning, territorial management, and urban planning; Regulatory Decree No. 15/2015 Soil classification and reclassification; Law No. 75/2017 Commons and community production; Decree-Law No. 294/2009 Rural lease regime; Law No. 78/2017 creates a simplified cadastral information system). There is as well legislation that regulates forestry activities, its legal declaration and</p> <p>transportation for initial processing. All timber cuts require administrative notification and are subject to administrative control by the Institute for Nature Conservation and Forests (ICNF). For cutting, extraordinary cutting, thinning, or uprooting forest species trees, a prior declaration must be made per parcel to be cut to the ICNF (Decree-Law No. 31/2020, which defines the regime of cutting manifest, extraordinary cutting, thinning, uprooting trees and traceability of wood material). This declaration is made through the Tree Cutting Manifest (MCA). This manifest describes the harvest operations performed, the species involved, records the operations to be carried out until the first transformation and cover the entire period during which the forest operations were taken. The MCA is registered by whoever is going to cut trees and requires a map of areas with a survey/delimitation in aerial photograph of the plot affected by the forestry work. When there is no cadastre available, it is the owner or logger who delimits the property in aerial photograph or uploads the property survey. Such plots, with unknown owner, cannot be cut/bought/sold.</p> <p>ICNF performs the functions of national forestry authority and also of national authority for nature conservation and biodiversity; its mission is to propose, monitor, and ensure the implementation of policies for nature</p>

conservation and forests, aiming at the conservation, sustainable use, valorisation, enjoyment, and public recognition of natural heritage (Decree-Law No. 135/2012 Organic Law of the Institute for Nature Conservation

and Forests). The Nature and Environment Protection Service, SEPNA, environment section of GNR, also has relevant functions for controlling environmental legality and forestry activities (Decree-Law No. 22/2006 Nature and Environment Protection Service (SEPNA) and creates the Intervention and Protection and Rescue Group (GIPS)).

Portugal has a CPI (Corruption Perception Index) score of 61 (2023) in a 100 top scale. There are also no reports significantly linking corruption with the

forestry sector in Portugal. The governance level can be classified as robust. There is no record of conflicts of significant magnitude related to forest land ownership or legitimacy for its use.

In summary, there is legal compliance documentation that allows identifying the feedstock (primary feedstock) sourced in mainland Portugal.

The Cutting Manifests and Transport Guides specify the materials and species that are subject to forestry operations/transformation/transport. There is also delivery documentation and invoices justifying the economic transactions. Additionally, for road transport, documentation with material identification is required.

Unimadeiras biomass processing (chipping) is made in the sourcing areas or nearby the sourcing areas. At customer's reception gates, the type of materials and its weight are duly recorded.

Means of verification:

- Cutting manifest MCA;
- Operator registry and previous notification in cases of all conifers because of Nematode Pine Plan -NMP;
- EUTR Operator Registry;
- Information about the wood/timber products which shall include: type, quantity, supplier, origin country and place;
- Invoices;

- Valid declaration of taxes non-debt;
- Obligatory insurance document;
- Valid declaration of social security non-debt;
- Unimadeiras's procedure on checking legality and origin of the feedstock;
- Forest Renting/leasing contract (Contrato de Arrendamento Florestal);
- For Collective or Comercial entities the commercial register (Certidão Permanente) to prove the specific responsibilities of owners/ managers/ presidents;
- Purchase documents.

<https://www.govindicators.org/interactive-data-access>

Identified risks:

Low risk: sourcing areas with CGPR (cadastre), located in the south and partially in the center of mainland Portugal.

Specified risk: areas with no CGPR (cadastre), mainly concentrated in the north of mainland Portugal on which plot boundaries may not be clearly available to check.

Sourcing area for which compliance needs to be demonstrated:

Areas where the specified risk designation above applies, included in the sourcing area: mainland of Portugal.

Mitigation measures:

- Investigations by means of legal document research which may be extended to interviews to local stakeholders (owners of neighbouring wood lands) and local authorities, whenever:

- Cadastral data is unavailable;

- Land impounded by the government;

- There are complaints about the land owner, or the harvest operation.

- A site visit is made by the logger before the felling. An interview with the land owner or his representative clarifies:

	<ul style="list-style-type: none"> <li>• Identification of the owner;</li> <li>• Proof of land ownership;</li> <li>• Ground boundaries of the land ownership;</li> <li>• Any specific issues regarding the land rights.</li> </ul> <p>- Confirmation of legal situation of qualified suppliers;</p> <p>- Confirmation of legal situation of the operation and sourcing area;</p> <p>- Procedures to conduct field Inspections to verify the aspects related with supplier, operation and sourcing area legal situation;</p> <p>- Disqualify material whose legal situation by any means cannot be confirmed;</p> <p>- Monitoring plan.</p>
<b>(ii) Forest regeneration of harvested areas</b>	
<b>Type of Risk Assessment used</b>	<input type="checkbox"/> Level A – proof at national or sub-national level <input checked="" type="checkbox"/> Level B – management system at forest sourcing area level
<b>Level A risk assessment description</b>	N/A
<b>Level B management system at the level of the forest sourcing area</b>	<p>In Portugal there is a clear and monitored system by competent administrations to control reforestation activities in logging areas, which allows compliance with the issues referred to in this indicator, such as the fact that forest regeneration is carried out within 5 years after logging and that there is no degradation of biodiversity in the regenerated area, including the fact that natural or semi-natural stands are not replaced by forest plantations. Law No. 33/1996 on the Bases of Forest Policy states: "Forest area holders are responsible for implementing silviculture and management practices, in accordance with regulations governing the use of forest resources.". Law No. 31/2014 on general principles of public policy on land, spatial planning, and urbanism states: "Owners of rustic land have the right to use the land according to its nature, expressed in the exploitation of the productive capacity of such land, directly or through third parties, preserving and enhancing cultural, natural, environmental, landscape,</p> <p>and biodiversity assets" and that "Owners have the duty to preserve and enhance natural, environmental, landscape, cultural, and biodiversity assets.". There is legislation governing the administrative process of authorization/notification of (re)forestation actions in Continental Portugal by Decree-Law No. 32/2020.</p>

Available forest statistics (IFN6) show stability in the area and volume of wood in Portugal from IFN5 (2005) to IFN6 (2015); in 2015, Portugal had 172 million cubic meters (Mm<sup>3</sup>) of growing wood, a value similar to that of IFN5 (2005). This fact is also reflected in the evolution of land use, according to data from the Portuguese General-Directory for Territorial Planning. The analysis of land use distribution and occupations by NUTS II confirms the high proportion of forested areas in the Centro region, the significant presence of forests in all regions, including Lisbon, coinciding with metropolitan territory, and in the Alentejo region, typically associated with the dominance of agroforestry systems. The Algarve and Norte regions have a considerable proportion of their territories occupied by scrubland, reflecting the lack of land utilization for productive activities with market value but ensuring an important reserve for nature conservation and biodiversity. These areas are crucial for maintaining ecosystem services and essential for the sustainability and quality of life not only in the region but also in larger territories. The dynamics and rhythms of change show that the evolution of land use and occupation between 1995 and 2018 occurred in two phases. The first phase, up to 2007, witnessed more significant changes, notably the decrease in agricultural land and the increase in forested and urbanized areas. It is noteworthy that the accelerated pace of urbanization

continued until 2010. The second phase, starting from 2007, was characterized by a more stable trajectory of land use for each class, regardless of internal balances and transitions, with a slight tendency towards an increase in agriculture in recent years.

Unimadeiras biomass comes mainly from harvest operations of eucalyptus plantations and pine stands, where clear-cutting is performed to obtain wood products and then reforestation of stands made. A smaller proportion of Unimadeiras biomass comes from other forestry operations (thinning, cutting of dry trees, pruning, etc.), where this indicator does not apply since there is no formal forest regeneration as the aim is to improve forest stands, generally by reducing density, which may affect pine and other tree species.

Identified risks:

Low risk: areas where forest management plan exists and/or FSC or PEFC certified areas.

Specified risk: in areas where no forest management plan is available: no PROF, PGF ZIF, PUB, SNAC, as well as no FSC or PEFC certification.

Sourcing area for which compliance needs to be demonstrated:

Areas where the specified risk designation above applies, included in the sourcing area: mainland of Portugal.

Mitigation measures:

- Analysis of owner's information regarding the future area's cover and use;
- Procedures for conduct field Inspections;
- Suppliers qualification;

	<ul style="list-style-type: none"> <li>- Monitoring plan;</li> <li>- Disqualify material which legal situation of harvesting cannot be confirmed</li> <li>- Disqualify material harvested from (planted) forest areas not regenerated nor planned to be regenerated.</li> </ul>
<p><b>(iii) That areas designated by international or national law or by the relevant competent authority for nature protection purposes, including in wetlands and peatlands, are protected unless evidence is provided that the harvesting of that raw material does not interfere with those nature protection purposes</b></p>	
<p><b>Type of Risk Assessment used</b></p>	<p><input type="checkbox"/> Level A – proof at national or sub-national level  <input checked="" type="checkbox"/> Level B – management system at forest sourcing area level</p>
<p><b>Level A risk assessment description</b></p>	<p>N/A</p>
<p><b>Level B management system at the level of the forest sourcing area</b></p>	<p>In Portugal protected areas and Natura 2000 sites covers 2.017.803 ha, meaning 20,47% of the territory. Different conservation attributes are concentrated mainly in Classified Areas by SNAC ( Classified Areas) and the IBA's (Important Bird Areas). However, there are threats to conservation attributes resulting from forestry operations in Classified Areas and IBA's which are not included in the National Network of Protected Areas/RNAP (2/3 of the total area is not included) and its safeguards are not proportional to the magnitude of these threats:</p> <ul style="list-style-type: none"> <li>- there aren't Site Management Plans or a consistent program of dissemination of good practices on forest areas Natura 2000 classified involving the mentioned agents;</li> <li>- the areas are not identified on the ground or in their access;</li> <li>- there is not a close inspection regime implemented properly and consistently throughout the national territory;</li> <li>- In the case of forest areas included in RNAP there is further consolidation in the field over time, which provides more proportionate safeguards to the level of existing threats;</li> <li>- there are information boards in many of the surrounding access to protected areas;</li> <li>- there is a history of proximity to the population and those involved in forest management because they were stabilised long time ago and over time have provided personalized services for each protected area, related to</li> </ul>

its own management and "command and control" services included nature / forest body guards or watchmen;

- there are more details in the information published about the effects of disturbances such as fires on habitats.

The regulation implemented in Portugal on oak and holm trees and stands

includes a comprehensive legislative framework with a legal action planning and project but also cuttings protection. This legislation also meets forest

management measures themselves related to intensity of exploitation, such as stripping and pruning. This regulation is relatively well established and

disclosed have being assimilated by the various agents involved as owners,

managers, and operators. Also, the planned forest management and the proper certification of sustainable forest management expanded in Portugal in recent years and is accounts for c. 236.000 hectares of certified forests of cork and holm oak species. Following several surveys on the fragilized state of cork and holm oak stands, there were also developed various processes to improve forest management practices, which were disclosed by the various entities involved. This includes a variety of contents and formats such codes of good cork forest practices but also pest and disease identification guides. Also, investment lines have been created supported by EU grants to assist owners and managers in pest monitoring of cork and holm oak stands (Operation 8.1.3 - Prevention of forest against biotic and abiotic agents) and for health recovery and restoration of forest stands of cork oak (Operation 8.1.4 - forest Restoration affected by biotic and abiotic agents or catastrophic events). The most current detailed results achieved by management and improvement actions on forest stands are not fully

known, since the full values of the last national inventory (IFN6) are still missing, however it is known that the class of "wooded area with cork oak" had an increase of 6% from 1995 to 2010, and holm oak has decreased 3% in the same period.

Priority habitats are protected by a legal framework, but their protection on the ground is not strong, except when they are located inside Protected areas. The threats caused by forest management activities on priority habitats are related to the destruction of the habitat itself by logging, applying in this case the habitats with timber species and also the impacts on understory habitats or surrounding areas. In the first case, where there are risks of logging of forest species which are themselves

the priority habitats and are classified as for example 2270 dunes with *Pinus pinea* forests and/or *Pinus pinaster*, 910 alluvial forests with *Alnus glutinosa* and *Fraxinus excelsior* (*Alno- Padion*, *Alnion incanae*, *Salicion albae*), 2250 Coastal dunes with *Juniperus spp.*, 5230 Arborescent matorral with *Laurus*

*nobilis*, 9560 Endemic Mediterranean forests with *Juniperus spp.*, 9580

Mediterranean forests of *Taxus baccata*, among others. In the second group are found many understory habitats. As an example, the priority habitat 2270 is briefly characterized by sand dunes Mediterranean pine forests, occurs in a stripe within the sea 15 km and the Tagus and Sado rivers and is dominated by:

-*Pinus pinaster* that have not been subject, in the past 20 years, to operations in understory and may be mature plantings (> 80 years) or regeneration of pine forests (> 30 years).

-*Pinus pinea* in dune systems in the south, with evolved matorral.

Since both species are explored for timber (the stone pine is also explored for pine cone) and the maritime pine is one of the woody species most exploited in Portugal, this habitat is subject to threats of exploitation as cutting and thinning but also all understory operations. That's why its conservation state is considered by ICNF as inadequate/unfavourable from 2008 to 2013. Information regarding wetlands in Portugal (for peatlands no forested areas related) states they are threatened ecosystems even when they are protected. Portugal has 1,8% of its territory occupied by wetlands, 79% of which is protected by the Ramsar Convention, covering this protection figure of 31 sites (about 132.487 ha). 82% of habitats related to wetlands are degraded. EPIC WebGis Portugal provides geographical information about wetlands. In the revised information one risk is associated to forestry: cutting of riparian vegetation.

- Destruction of natural riparian vegetation: Law nº 58/2005, 29/12; Law nº

54/2005, 15/11 Artº 25º.

Identified risks:

Low risk: areas covered by RNAP, areas managed by ICNF; no wetlands or

peatland areas.

Specified risk: private and communitarian forest areas classified by the National System of Classified Areas (SNAC) and in the forest areas considered IBAs (Important Bird and Biodiversity Areas), not covered by the National Network of Protected Areas RNAP. Private, communitarian and public forest areas not managed by ICNF. In wetlands there is the risk of cutting riparian vegetation due to harvest operations.

Sourcing area for which compliance needs to be demonstrated:

Areas where the specified risk designation above applies, included in the sourcing area: mainland of Portugal.

Mitigation measures:

- Suppliers qualification;
- Confirmation of legal situation of qualified suppliers;
- Confirmation of legal situation of the operation and sourcing area;
- Procedures for conduct field Inspections to verify the aspects related with supplier, operation and sourcing area legal situation;
- Disqualify material whose legal situation of harvesting cannot be confirmed.
- Ensure that feedstock does not come from riparian vegetation in wetlands.
- Monitoring plan.

<b>(iv) That harvesting is carried out considering the maintenance of soil quality and biodiversity with the aim of minimising negative impacts</b>	
<b>Type of Risk Assessment used</b>	<input type="checkbox"/> Level A – proof at national or sub-national level <input checked="" type="checkbox"/> Level B – management system at forest sourcing area level
<b>Level A risk assessment description</b>	N/A
<b>Level B management system at the level of the forest sourcing area</b>	<p>Soil quality in Portugal has not a positive evolution since historic times, as the major part of Mediterranean region. Following FAO. At national level, following</p> <p>Desertification Convention 5.1 Desertification Susceptibility: for Portugal can be concluded that in the last half century, the area of susceptibility to desertification clearly expanded in the mainland territory particularly in the period 1970-2000, and then for the 1980-2010 series, and is even more relevant as expansion for the 2000-2010 series, with annual droughts particularly severe. It is known, therefore, that aridity, then susceptibility to desertification, affected, in the last three decades (1980-2010), 58% of the territory of the Continent, when in the series of 1960-1990 this affectation was of 36%, being included in this context mainly the areas of the South and the Interior Center and North. In the climatic series of the last decade, about 63% of the mainland territory is classified as areas susceptible to desertification. FAO- Land Degradation Index — LDI, developed for mainland Portugal (2000-2010) states that the national territory</p>

has 32,6% degraded lands and 60,3% are included in the fair to good condition. Lands and soils that accumulate biomass over time are about 67,8% but static

trends were observed in 30,8% of territory and 1,5% have a regression on land

quality. Later on, Forest Services used aridity index to produce the susceptible

map of desertification, indicating priority areas for EU forest grants for forestation

projects. The results of this FAO study, among others, where used to create a

National Program Against Desertification, which is adopted, among others by

Regional Forest Plans, defining forest procedures for spaces for carbon sink and

other for energetic use of biomass. The private and public Forest Management

Plans should adopt these designations and procedures on their implemented

management practices and procedures. Specifically on forest soils it is

recognized the problem of nutrient and carbon exportation due to harvesting and

residues removal in a significant part of the country which is affected by erosion

and desertification problems. Although there is a broad consensus over soils

fragility in much of the country, policies that contribute decisively to the conservation and improvement of soil quality in Portugal have not been implemented on the last decades. These implemented forest policies have not

prevented the installation and exploitation of commercial timber forest stands

including intensive softwood and hardwood plantations in sensitive soils with

erosion risks, contributing to expand the susceptible areas to desertification. The

legal and regulatory framework includes restrictions and safeguards for soil use

and mobilization operations with particular emphasis on sensitive, steep and

near-water areas (called the National Ecological Reserve -REN). However, as

shown by above cited studies and data, reality at ground level does not reflect

the application of these restrictions.

Forest residues removal from the field is regulated in Portugal so loggers and

owners have some legal obligations, related with both fire and phytosanitary

policies. These obligations depend on tree species, areas, seasons and regions.

Process of forest residue treatment is commonly included on Best Practices but

also on wood supply contracts, and forest land leasing's.

Biodiversity is included on fundamental environmental law on its article 10th (Law

19/2014 14/04) and is fully covered by biodiversity and nature conservation legal

framework. In Continental Portugal the protected areas and Natura 2000 sites

covers 2.017.803 ha meaning 20.47% of the territory. From the Convention on

Biological Diversity: 'Portugal's National Biodiversity Strategic Action Plan

NBSAP was based on the following ten guiding principles: an overall higher level

of protection; the sustainable use of biological resources; prevention; precaution;

recuperation; responsibility; integration; participation; international cooperation

and decentralization. The NBSAP then lists 10 fundamental strategies that form

the basis of their action plan, which include: to promote scientific research and

knowledge of local patrimony; to enhance the National Protected Areas Network;

to promote the valorisation of the protected areas, and ensure the conservation

of all social, cultural and natural components; ensure conservation and valuation

of areas within the Natura 2000 Network; implement, across the entire national

territory, actions specific to the conservation and management of species and

habitats of particular interest; integrate conservation and sustainable use principles into national and regional policies and laws; reinforce cooperation between all levels of administration; promote education and formation in

conservation fields; ensure public education, awareness and sensitization; and

strengthen international cooperation.(...)'.

About 3,600 species of plants occur in

Portugal. There are 69 taxa of terrestrial mammals, a total of 313 bird species, of

which around 35% are threatened in some ways, and 17 amphibian and 34

reptile species that occur in Portugal. Some of the main threats to the biological

diversity of Portugal include: change or destruction of habitats; pollution; overexploitation; invasive alien species; urbanization and fires.

Means of verification:

- Unimadeiras desk assessment and evaluation of the risks and possible impacts,

including environmental, of harvesting operations.

Manifests (MCA and NMP);

- Erosion, desertification programs and maps (REN);
- Approved EIA (Environmental Impact Assessment), when applicable;
- Approved Forest Management Plan, when applicable;
- Records of oil and hazardous chemicals deliveries;
- Records of Unimadeiras field inspections;
- Monitoring records;
- Regional Forest Plan;
- Best Management Practices;
- Level of enforcement;
- Regional, publicly available data from a credible third party.

Identified risks:

- Low risk on very small size forest properties as small scale also reduces the

threats and risks involved with soil operations, areas with forest management

plans in place and areas with no classified habitats identified.

- Specified risk on soil quality of sourcing biomass feedstock on forest lands

located on desertification susceptible area according to Forest Services (ICNF)

cartography, without Forest Management Plan, and with identified classified

habitats.

Sourcing area for which compliance needs to be demonstrated:

Areas where the specified risk designation above applies, included in the sourcing area: mainland of Portugal.

Mitigation measures:

- Analysis of sourcing area information regarding environmental aspects;

- Consultation of maps and other sources of information regarding soil, biodiversity and classified areas for nature protection, Red lists for Portugal,

identifying and addressing potential threats, HCV 1 – Species diversity). This

information is given to all feedstock suppliers;

- Endangered flora and fauna are indicated on the harvesting maps.

	<ul style="list-style-type: none"> <li>- Feedstock suppliers are trained to recognise the protected biodiversity and how to conserve them.</li> <li>- Procedures for conduct field Inspections;</li> <li>- Disqualify material coming from areas where negative impacts on soil quality and biodiversity have occurred;</li> <li>- Promotion of Good Forest Practices, including measures to conserve and increase biodiversity (for example, standing dead wood, prescribed burning and other disturbances improving the conditions for endangered species flora and fauna);</li> <li>- Monitoring plan.</li> </ul>
<p><b>(v) That harvesting maintains or improves the long-term production capacity of the forest.</b></p>	
<p><b>Type of Risk Assessment used</b></p>	<p><input type="checkbox"/> Level A – proof at national or sub-national level  <input checked="" type="checkbox"/> Level B – management system at forest sourcing area level</p>
<p><b>Level A risk assessment description</b></p>	<p>N/A</p>
<p><b>Level B management system at the level of the forest sourcing area</b></p>	<p>Statistical information on National Forest Inventory is fully available from IFN6 (2015). IFN6 (2015) for main species used in biomass production show that:</p> <p>Forest areas (forest, bush and unproductive land) occupy 6.2 million hectares (69.4%) of the national territory. The forest, which includes wooded and temporarily deforested land (cut, burned and regenerating surfaces), is the main use of national soil (36%).</p> <p>The downward trend in the forest area, which has been observed since 1995,</p>

was reversed in 2015, with the inventory registering an increase of 60 thousand ha (1.9%) compared to 2010 (date of the last assessment).

- Eucalyptus plantations are larger Portuguese forests. Eucalyptus trees occupy 845 000 ha, about 26% of the continental forest and have shown a systematic increase over the past 50 years.
- Pinus pinaster forests are the second forest formation, with an area close to 1 million hectares, with forest ecosystems having the greatest reduction in the occupied area. The decrease in area is due that maritime pine forests are very affected by fires and pests (the nematode being the most significant), which surpasses the significant increase in the pine tree pine area (20.7 thousand ha; 12% between IFN5 and IFN6). However, in the period between 2010 and 2015, the maritime pine area experienced a very significant slowdown compared to the sharp downward trend seen since 1995 (IFN4), which reveals the extraordinary resilience of these pine forests to disturbances.

For Eucalyptus the average annual growth is of 4,375,000 m<sup>3</sup>/year, based on 2005 inventory data. Currently the value will be significantly higher. Eucalyptus wood from Portugal consumption in 2014 was 5,400,000 m<sup>3</sup> (CELPA data). Eucalyptus is a fast growing specie, over 12 years, with one and only cut on the

period: final clear cut. So harvesting does not compromise long-term production

of the forest. For *Pinus pinaster* the average annual growth is of 3,650,000 m<sup>3</sup>/year, based on 2005 inventory data. Currently the value will be lower. *Pinus pinaster* wood from Portugal harvested in 2014 was 2,247,000 m<sup>3</sup> (Centro Pinus data). The maintenance of wood volumes between the last two inventories reveal that in this period forest production, in global terms, can be considered as sustainable since the cut of wood and losses due to fires or pests were in balance with the growth of Forest. However, the volume of eucalyptus growing wood remains constant since IFN5, 43 Mm<sup>3</sup>, despite the increase in the area of around 59

thousand ha. On this analysis is also relevant to take into account that:

- *Pinus* Wilt Disease/Nemátodo-da-madeira-do-pinheiro has significantly affected

*Pinus pinaster*.

- Fires continue to be a relevant problem in Portugal.

- Data from Centro Pinus states that pine wood consumption for the timber

industry in 2022 was 3,98 Mm<sup>3</sup>, less 3,6% face to the previous year. 27% of pine wood used by Centro Pinus associated companies was imported in 2021.

Percentage of imported pine wood used in 2006 was 3%. Therefore, lack of pine wood from Portugal is being covered with imports, mainly from Spain.

- Data from Biond (former CELPA) states that in 2021 the wood consumption by the pulp industry increased 3,3% face to 2020, arising from an increase of 3,8% of eucalyptus wood and from a decrease of 3,0% of maritime-pine.

Eucalyptus consumption of pulp and paper industry in 2021 was 8.068 Mm<sup>3</sup>, in 2018 7.902 Mm<sup>3</sup>, in 2015 7.579 Mm<sup>3</sup>, in 2012 7.046 Mm<sup>3</sup>.

Maritime pine consumption of pulp and paper industry in 2021 was 611 Mm<sup>3</sup>, in 2018 632 Mm<sup>3</sup>, in 2015 665 Mm<sup>3</sup>, in 2012 664 Mm<sup>3</sup>.

From the overall wood consumption of the pulp and paper industry in 2021, 33% was imported.

Means of verification:

- Desk evaluation to sourcing areas: volume and growth data, yield calculations and operational practice indicate that biomass feedstock harvesting rates avoid significant negative impacts on forest productivity and long-term economic viability.

- Unimadeiras inspections to feedstock suppliers and to the harvesting operations, seeking among other aspects, the use of the best forestry practices.

- Existing legislation.

- Level of enforcement.

## Annex 4: RED II detailed findings for Trees Outside Forest (TOF) feedstock

NOTE: For “Trees outside forests (TOF) – Urban and landscape feedstock“ no REDII sustainability requirements apply, only the GHG savings criteria apply (SBP REDII Bridging ID Section 4.2). The land use category in this case is neither forest land nor agricultural land. For “Trees outside forests (TOF) – Agricultural land feedstock“ the applicable criteria are Article 29 paragraphs (2)-(5).

Country:

REDII Article 29 (2): Soil quality and soil carbon	
Biofuels, bioliquids and biomass fuels produced from waste and residues derived not from forestry but from agricultural land shall be taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 only where operators or national authorities have monitoring or management plans in place in order to address the impacts on soil quality and soil carbon. Information about how those impacts are monitored and managed shall be reported pursuant to Article 30(3).	
<i>(i) Impacts on soil quality</i>	
Step 1: Identification of applicable laws	
Have the applicable law(s) been identified?

### REDII Article 29 (3a): Protection of land with high biodiversity value

*Biofuels, bioliquids and biomass fuels produced from agricultural biomass taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 shall not be made from raw material obtained from land with a high biodiversity value, namely land that had one of the following statuses in or after January 2008, whether or not the land continues to have that status:*

- (a) *primary forest and other wooded land, namely forest and other wooded land of native species, where there is no clearly visible indication of human activity and the ecological processes are not significantly disturbed;*

Description of a management system process to meet the requirement.	N/A
---	-----

### REDII Article 29 (3b): Protection of land with high biodiversity value

*Biofuels, bioliquids and biomass fuels produced from agricultural biomass taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 shall not be made from raw material obtained from land with a high biodiversity value, namely land that had one of the following statuses in or after January 2008, whether or not the land continues to have that status:*

- (b) *highly biodiverse forest and other wooded land which is species-rich and not degraded, or has been identified as being highly biodiverse by the relevant competent authority, unless evidence is provided that the production of that raw material did not interfere with those nature protection purposes;*

Description of a management system process to meet the requirement.	N/A
---	-----

### REDII Article 29 (3c): Protection of land with high biodiversity value

*Biofuels, bioliquids and biomass fuels produced from agricultural biomass taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 shall not be made from raw material obtained from land with a high biodiversity value, namely land that had one of the following statuses in or after January 2008, whether or not the land continues to have that status:*

- (c) *areas designated:*
  - (i) *by law or by the relevant competent authority for nature protection purposes; or*
  - (ii) *for the protection of rare, threatened or endangered ecosystems or species recognised by international agreements or included in lists drawn up by intergovernmental organisations or the International Union for the Conservation of Nature, subject to their recognition in accordance with the first subparagraph of Article 30(4),*

Description of a management system process to meet the requirement.	N/A
<b>REDII Article 29 (3d): Protection of land with high biodiversity value</b>	
<p><i>Biofuels, bioliquids and biomass fuels produced from agricultural biomass taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 shall not be made from raw material obtained from land with a high biodiversity value, namely land that had one of the following statuses in or after January 2008, whether or not the land continues to have that status:</i></p> <p>(d) <i>highly biodiverse grassland spanning more than one hectare that is:</i></p> <p>(i) <i>natural, namely grassland that would remain grassland in the absence of human intervention and that maintains the natural species composition and ecological characteristics and processes; or</i></p> <p>(ii) <i>non-natural, namely grassland that would cease to be grassland in the absence of human intervention and that is species-rich and not degraded and has been identified as being highly biodiverse by the relevant competent authority, unless evidence is provided that the harvesting of the raw material is necessary to preserve its status as highly biodiverse grassland.</i></p>	
Description of a management system process to meet the requirement.	N/A

<b>REDII Article 29 (4a): Protection of land with high carbon stock</b>	
<p><i>Biofuels, bioliquids and biomass fuels produced from agricultural biomass taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 shall not be made from raw material obtained from land with high-carbon stock, namely land that had one of the following statuses in January 2008 and no longer has that status:</i></p> <p>(a) <i>wetlands, namely land that is covered with or saturated by water permanently or for a significant part of the year;</i></p> <p><i>This paragraph shall not apply if, at the time the raw material was obtained, the land had the same status as it had in January 2008.</i></p>	
Description of a management system process to meet the requirement.	N/A
<b>REDII Article 29 (4b): Protection of land with high carbon stock</b>	
<p><i>Biofuels, bioliquids and biomass fuels produced from agricultural biomass taken into account for the purposes referred to in points (a), (b) and (c) of the first subparagraph of paragraph 1 shall not be made from raw material obtained from land with high-carbon stock, namely land that had one of the following statuses in January 2008 and no longer has that status:</i></p> <p>(b) <i>continuously forested areas, namely land spanning more than one hectare with trees higher than five metres and a canopy cover of more than 30 %, or trees able to reach those thresholds in situ;</i></p>	

<i>This paragraph shall not apply if, at the time the raw material was obtained, the land had the same status as it had in January 2008.</i>
